Profile

Enthusiastic and detail-oriented computer science graduate seeking an entry-level position to apply my strong analytical and technical skills to solve real-world problems. Proficient in Python, machine learning techniques, statistical analysis, and data visualization tools. Eager to learn and grow in a fast-paced and collaborative environment.

Experience

Data Science Intern, *Ineuron* — 07/2022 – 08/2023

- Designed, developed, and tested end-to-end data science pipelines.
- Utilized Statistics, ML, Python, Pandas, Numpy, Analytical tools, SQL.
- Implemented Jet Engine RUL prediction data pipeline.

Python Intern, *IIT Kanpur* — 06/2019 – 07/2019

- Gained hands-on experience in core Python and SQL.
- Performed statistical analysis and data visualization on Stackoverflow.

Education

Bachelor of Technology, *AKTU* — 2018 – 2022
Major in Computer Science and Engineering, CGPA- 7.94 — Lucknow

Intermediate, *Amrit Public School* — 2016 – 2018
Major in Physics, Chemistry, Mathematics, Percentage - 83.4 — Mau

High School, *Amrit Public School* — 2014 – 2016
Genral, CGPA - 10 — Mau

Projects

Jet Engine RUL Prediction

Developed a Data Science pipeline to predict the remaining useful life (RUL) of jet engines.

- Collected & preprocessed simulation data of engine degradation provided by C-MAPSS from NASA Ames.
- Applied feature engineering techniques to extract relevant features from the engine degradation data.
- Trained and evaluated various ML algorithms to identify the most effective model for RUL prediction.
- Achieved a mean absolute error (MAE) of 10% in predicting RUL, which can significantly improve maintenance planning and reduce operational costs for airlines.

Key skills: Python, Machine Learning, Data Preprocessing, Feature Engineering, Model Evaluation, MongoDB, Docker, Flask, Git.

APS Sensor Fault detection

Developed a Data Science pipeline to detect Air Pressure System (APS) sensor faults in heavy-duty vehicles.

- Employed various data preprocessing techniques to handle missing values and outliers.
- Trained and evaluated several machine learning algorithms to identify the most effective model for APS sensor fault detection.
- Achieved an accuracy of 95% in predicting APS sensor faults, significantly reducing unnecessary repairs and downtime for heavy-duty vehicles.

Key skills: Python, Machine Learning, Data Preprocessing, Model Evaluation

Machinet
Machinet is a Python app for building ML models. It provides a simple & intuitive UI for building, training, & evaluating models. It has features such as:

- Support for a variety of ML algorithms including linear & logistic regression, decision trees, random forests, support vector machines.
- It has inbuilt of tools for selecting the best model for your task and tuning its hyperparameters.

Key Skills: Python, Tkinter, Machine Learning.

Publications

Machinet - System for Assisting Building of Machine Learning Model,
International Journal of Scientific Research in Science, Engineering and Technology
Machinet facilitates machine learning practitioners to test the accuracy of different machine learning models on their dataset and build a selected model (based on test results) by tuning the hyperparameters as required to increase the accuracy.

International Journal of Scientific Research in Science, Engineering, and Technology(IJSRSET), Print ISSN : 2395-1990, Online ISSN : 2394-4099, Volume 9, Issue 3, pp.130-140, May-June-2022.

Skills

Statistics
Machine Learning
Deep Learning
Python
Power Bi
Excel
MongoDB
Git
Docker
Jira
MySQL

Certificates

- Microsoft Technology Associate - Python
- Jira Fundamentals
- Jira Service Management Fundamentals
- Data Science Bootcamp - Ineuron
