PROFESSIONAL EXPERIENCE: -

Associate Cloud Engineer- Cloud Astra Technologies, Noida

May-2022 to Present

Client Name: - Tompkins Robotics, Orlando

Tompkins Robotics focuses on robotic automation of distribution and fulfillment operations. Beginning over five years ago with robotic sortation solution, tSort™

Roles and Responsibilities:

- Managed version control and repository management including branching and tagging using Git/Bitbucket tool.
 - Configured and maintained AWS Workspace for client service.
 - Effectively managed tickets and monitored project progress using Jira Ticketing Tool and timely issue resolution.
 - Managed and administered Linux-based operating systems, including Amazon Linux, Ubuntu, CentOS7, handling system administration tasks, package management, and disk management.
 - Implemented and set up Docker environment for application/db /tools Env. Effectively managed and retrieved images from private repositories to ensure smooth deployment of containerized applications.
 - Implemented and managed AWS cloud infrastructures, including EC2 instances, S3 buckets, VPC configurations, IAM roles, EBS volumes, Route53 DNS management, Load Balancers etc.
 - Implemented monitoring and alerting using AWS CloudWatch to ensure the health and performance of the infrastructure and applications.
 - Responsible for automating instance configuration tasks by utilizing Ansible Playbooks.
 - Managed and deployed QA and production servers, addressed disk space issues, and resolved container log-related issues for application/database/tool nodes, serving Tompkins' valuable customers such as GXO, PM, and Walgreens.
