EDUCATION

- **B.Tech in Information Technology** *Expected Graduation, May 2025*
BBDITM (Affiliated By AKTU) Lucknow, Uttar Pradesh.
Relevant Coursework: Web Design, Software Engineering, DSA, OOPs, DBMS, & Computer Networking.
- **Intermediate:** 82%
- **Highschool:** 84%

SUMMARY

I'm a final-year B.Tech student specializing in full-stack development with expertise in the MERN stack (MongoDB, Express.js, React, Node.js) and a solid understanding of AWS services for deploying scalable and efficient web applications. Dedicated to creating accessible and inclusive web experiences, ensuring usability for diverse audiences. Beyond coding, my passion for chess enriches my strategic thinking.

SKILLS

Programming Languages: JavaScript, C++, HTML, CSS, SQL.

Frameworks & Libraries: Tailwind CSS, Express.js, Node.js, React.js.

Tools & Platforms: Postman, VS Code, AWS, Git, Github Actions, MongoDB.

APIs & UI Design: REST APIs, Bootstrap, Material UI, Shadcn UI.

PROJECTS

AWS Hosting: MERN - [LINK](#) Aug 2024

Tools: AWS, React, Express, Node.

In this project, I have deployed a locally developed **Group chat app** made with **react** as front-end, **node** as back-end and using **AWS** services like **lambda functions** for backend and **S3** for front-end to make the web app publically accessible.

YelpCamp Campgrounds - [LINK](#) Sep 2024

Tools: MongoDB, Express, React, Node.

Developed a **CRUD** web app where users can **register** and **authenticate** themselves, **manage**, **add** and **search campgrounds** on a map, and provide feedback comments and likes. the front-end is fully responsive and developed using **React**, I also implemented secure authentication with jwt, and handled the backend with **Node.js** and **Express**. State management was handled with the **Context API** for a consistent application state.

Geolocation-Based Attendance Tracking System - [LINK](#) Oct 2024 - In Progress

Tools: React Native, MongoDB, Express, Node.js, AWS, Location Services.

Developing a mobile application to streamline **attendance tracking** by leveraging **geolocation services** for precise, real-time user verification. The app integrates **React Native** for a seamless **cross-platform experience**, **MongoDB** for scalable data storage, and **AWS** for hosting backend services. The system utilizes **geofencing** to ensure accuracy and efficiency in attendance logging, with a focus on user-friendly design and secure data handling.

ACHIEVEMENTS

- **Selected as College Finalists for Smart India Hackathon 2024:** Ranked in the top 25 out of 125 teams in the internal hackathon at BBDITM and advanced to the Screening Round with Team Mavericks03 by developing a "Geolocation-Based Attendance System" prototype for GAIL's Problem Statement 1707. Contributed to coding, brainstorming, and app development under tight deadlines, demonstrating strong problem-solving and collaboration skills.
- **Led the departmental magazine design team**, overseeing the organization and management of various design projects, which enhanced the team's creative output and increased visibility.
