PROFESSIONAL SUMMARY

- Over 3.2 years of expertise in developing object-oriented programming (OOP) and web-based enterprise applications with hands-on experience across the full Software Development Life Cycle (SDLC).
- Skilled in designing and maintaining architectures for RESTful APIs and web services using Spring Boot.
- Proficient in leveraging Spring Boot, Microservices, and Spring Data JPA for building robust and scalable solutions.
- Extensive experience in working with Java 8, utilizing its advanced features such as lambda expressions, streams, and functional interfaces for cleaner and more efficient code.
- Adept at crafting complex PL/SQL queries and managing relational databases, including Oracle and MySQL.
- Strong foundation in Core Java, with expertise in Multithreading, Collections, and JDBC.
- Experienced in deploying applications on web servers like Apache Tomcat.
- Familiar with using Spring Boot Actuator for application monitoring and management in production environments.

WORK EXPERIENCE

Web Earn Solutions Pvt Ltd - Java Software Developer
Noida

Aug 2022-PRESENT

PROJECTS

1: E-Commerce Order Management Backend System

Environment: Spring Boot, Spring Data JPA, Rest APIs, Core Java, Collections, Java-8

Database: MySQL.

Description:

Designed and developed a production-grade e-commerce backend using Spring Boot, following layered architecture and best practices. Implemented a secure REST API to handle user registration, authentication (JWT), product management, cart operations, order placement and role-based access control.

Responsibilities:

- Developed user authentication and authorization system using JWT and Spring Security.
- Built RESTful APIs for managing products, categories, cart, and orders.
- Implemented business logic for add-to-cart, checkout and order tracking features.
- Applied role-based access controls and secured endpoints using token validation.

TECHNICAL SKILLS

- Core Java
- Java 8
- Multithreading
- Collections
- Spring Data JPA
- Spring
- Spring Boot
- Rest API
- Postman API
- Microservices
- Design Patterns
- GIT
- SQL
- MySQL

BUILD TOOLS

- Maven

IDE & GUI

- STS
- Eclipse
- Visual Studio
- IntelliJ IDEA

Operating System

- Windows

- Managed MySQL database with JPA including entity relationships (OneToMany, ManyToOne).
- Followed clean code principles and used Lombok to reduce boilerplate in entity and service layers.

2: Online Health Insurance Services

Environment: Spring MVC, Hibernate, JSP, Collection Framework, Core Java, java-8

Database: MySQL.

Description:

Designed and developed an online health insurance services application that increased customer satisfaction by enabling customers to inquire about and subscribe to health insurance policies from different companies. The application allows customers to log in and check the policy and plans with minimal effort, and when they need to claim, customers can easily search for a hospital nearby and get the money from the credit manager.

Responsibilities:

- Developed a REST API with Spring Boot Framework that allows users to create and manage their accounts, resulting increase in customer signups as measured by Google Analytics.
- Designed and developed REST -based microservices using Spring Boot that met performance metrics of less than 10 MS response time.
- Designed and delivered an efficient, customer-centric online health insurance service that increased customer satisfaction and retention
- Reduced DAO object creation time by writing DAOs to load database tables with Hibernate instead of using SQL statements in the DAO.

EDUCATION

- IMS Engineering College
Ghaziabad Uttar Pradesh
B Tech in Computer Science
Engineering

LANGUAGES

Hindi, English
