• Contributed to GirlScript summer of code 📧

Participated as a contributor.

- Designed and implemented the front-end part of the multiple website templates
- Learned and applied different types of technologies and uses like Git and GitHub
- Collaborated with other contributor folks and learn different types of methodology for them – Managed the area of user-interface designing on my own

Personal Projects

- **Flawless - Legal Educational Platform (React Native + MERN) ⚡**

Flawless is come into play for solving study resources-related problems.

- Founded the app which helps users to get a better understanding of the law and consume unbiased information
- Employing React Native, Rest API, the robust MERN Stack, and fortified by JWT Auth
- Some of the features of the app are reading articles, an Inbuilt dictionary, Rich resources, and Easy use.

- **Automatic Expense Manger – (React Native + MERN)**

This is a React Native mobile application that enables users to manage and track their finances

- Created a mobile application that helps users manage their expenses automatically with e-transaction SMS
- The app enables automatic categorization & provides users with insights into their spending habits
- Utilized MongoDB, Mongoose, and Express for robust backend data handling and efficient API integration
- Leveraged Firebase for secure and scalable authentication & data storage

- **Device Info – System Insight (React Native) ⚡**

The ultimate app for obtaining in-depth insights into your device.

- Developed an app that provides in-depth insights into a user's device hardware, software, and connectivity.
- Offers a comprehensive overview of the device's specifications, helping users understand their device's capabilities, limitations, and performance metrics

- **QR Code – Scanner & Generator (React Native)⚡**

This is an app for easy QR code management, allowing users to scan existing codes and create custom QR codes

- Developed a QR Code Scanner & Generator app for seamless QR code management.
- Allows users to quickly decode existing QR codes, such as website URLs, contact information, Wi-Fi network details, and product information.
- Enables users to create custom QR codes in seconds for sharing various types of content.

- **Earth Observatory - Natural Event Tracker (React Js)⚡**

Web App made for tracking natural events,

- Developed a web application using Google Map API that can help users keep track of various Natural events such as wildfires from all over the world
- Powered by React JS, enriched with Tailwind CSS, and seamlessly integrated with the NASA API, this website embodies dynamic design and functionality

- **Meta Data - Link Previewer (React Js) ⚡**

It can assist users in previewing almost every valid link on the internet.

- Created a Link Previewer web application that can Provide your Link's Metadata such as type, images, title, and description
- Employed React JS, Material UI, and Rapid API, for the dynamic design and seamless functionality
- JavaScript and CSS contribute further to an enhanced user experience, elevating overall performance

Certificates and Achievements

- **Participation certificates**

- GirlScript summer

of code

- Legal pitch deck at Amity University

- **Course completion**

- Node JS on Udemy

- JavaScript on Udemy

- **Level on HackerRank**

- Gold level in Java on HackerRank

- Bronze level in problem-solving on HackerRank
