Data Visualization/Engineering: Power BI, MS Excel, MS Access.

Techniques: Agile Methodologies, SDLC, Manual Testing, Data Structures and Algorithms, Git SCM.

Tools and Framework: - React.js, Redux, Node.js, MongoDB, Express.js, Hardhat, Truffle.

Miscellaneous Skills: Blockchain and Smart Contracts, Ethers.JS, Web3.JS.

PERSONAL PROJECTS

DECENTRALIZED DISCORD CLONE

- Developed a feature-rich application with server channels, enabling users to create and delete channels.
- Implemented message management functionality, allowing server owners to delete any message and message authors to delete and edit their own messages.
- Streamlined member management by empowering server owners to kick members and enabling users to easily leave the server by right clicking the server.
- Facilitated server interaction by enabling users to join servers with an invite code and providing server management options such as creating servers, editing server name and icon URL in server settings, and deleting servers.
- Enhanced user management capabilities by incorporating account management features, such as changing username and avatar, deleting user accounts, and preventing unauthorized login usage.
- Continuously expanding and refining the application's functionality to meet user needs and expectations.

DECENTRALIZED REALSTATE NFT APP

- Developed a decentralized property listing and management system.
- Implemented secure transaction processing using Escrow smart contracts.
- Designed a property inspection and approval workflow.
- Integrated with MetaMask for Ethereum Blockchain interactions.
- Utilized a local Hardhat development network for testing and development.
- Created a seamless user experience with a React frontend.
