Professional Summary

- Having 3 Years of experience as a Software Test Engineer both Manual & Automation Testing.
- Proficient in Software Development life cycle (SDLC), Strong Exposure on Software Test Life Cycle (STLC) and Bug Life Cycle (BLC).
- Experienced in both Automation (Selenium) and Manual Testing.
- Experienced in Designing and executing the automation scripts using Selenium-Web Driver using Java.
- Experienced in STLC Concepts like Functional, Integration, System and SmokeTesting.
- Experienced in AI Testing tools such as TestIM, Functionaize & Test SIGMA.
- Experienced in both Water Fall and Agile Methodologies.
- Experienced in Mobile Testing.
- Knowledge in API Testing.
- Prepared and shared the Daily and Weekly QA Summary Report with Customer.
- Prepared Defect summary report & organised the Defect Triage Meeting and discussed the defects with Customer for any queries.

Professional experience

- Currently working in Radiant Digital Solutions Private Ltd Hyderabad from June -2022 to till date.

Education

- Completed MBA from NITHM College in 2018.

TECHNICAL SKILLS

Programming Languages	Basic JAVA
Test Automation	Selenium Web Driver
Test Automation Framework	TestNg
Defect Management Tools	JIRA

Certifications

- Microsoft Certified Azure AI Fundamentals on May'25.
- ISTQB® Certified Tester Foundation Level v4.0 Tester on Feb'25.

Project Experience

Project – 1 : Pocket ARK
Role : Manual & Automation Tester
Client : RSL FORCE
Duration : January 2025 – Till Date

Description: The application provides real-time location-based information, enabling workers to easily connect with local emergency responders, medical facilities, and essential services. It aims to enhance safety, improve response times, and ensure quick access to critical resources, promoting a safer working environment on construction sites.

Roles and Responsibilities

- Understand the requirement & written the Test Cases. From the list of Test Cases, performed the feasibility analysis and identified the Automation Test Cases which are feasible for Automation
- Designed and implemented automated test scripts using Selenium WebDriver and TestNG Framework.
- Developed a robust Selenium-TestNG automation framework from scratch.
- Automated over 120 regression scenarios in the Pocket Ark project, reducing manual effort by 40%.
- Maintained regression test suites to ensure consistent build quality across releases.
- Executing Tests and Analysing Results
- Involved in preparing defects summary report.

Project – 2 : **Capacity Management**
Role : **Manual Tester**
Client : **New Fold**
Duration : **April 2024 – December 2024**

Description: Project is for in a software company is the process of ensuring that the right number of resources (e.g., employees, tools, infrastructure) are available at the right time to meet the demands of projects. It's about balancing employee availability, project requirements, and the company's operational needs.

Roles and Responsibilities

- Analysed software requirements to define test objectives and ensure clear understanding of functionality.
- Performed Functional, Integration, System, Regression, Smoke, Testing across multiple releases.
- Designed effective test cases using standard techniques for maximum coverage.
- Created and maintained QA documentation such as Traceability Matrices, Execution Reports, and Defect Logs.
- Logged and managed defects using Jira, ensuring timely follow-up and closure.
- Executed manual and automated tests, analysing results to detect and report anomalies.
- Summarized defects and key findings in reports for stakeholder visibility and continuous improvement.

Project – 3 : **CMS (Court Management System)**
Role : **Manual & Automation Tester**
Client : **17 Courts Florida**
Duration : **December 2022 – March 2024**

Description: CMS (Court Management System) includes maintaining of different authority forms and data, which is related to judge admin.

Roles and Responsibilities

- Understand the requirement & written the Test Cases. From the list of Test Cases, performed the feasibility analysis and identified the Automation Test Cases which are feasible for Automation
- Analysed requirements and defined test strategies for Functional, Integration, System, Regression, Smoke Testing.
- Created and executed test cases using effective design techniques; documented results and tracked defects using Jira.
- Prepared QA artifacts including Traceability Matrices, Execution Reports, and Defect Summaries.
- Built and maintained a Selenium-TestNG automation framework; automated 120+ regression scenarios, reducing manual effort by 40%.
- Ensured consistent test coverage and build stability through regular suite maintenance and test execution.
