PROFILE

Working as a software tester and have accumulated an overall experience of more than 5 years which comprises Automation Testing, Manual Testing, API testing, and API Chaining. Extensively involved in the preparation of Test plans, Test cases, and execution of Manual Test cases using various like boundary value analysis, equivalence partitioning etc. depending on the requirement. I have worked in agile framework and have good knowledge of STLC & SDLC process. Proficient in finding and tracking bugs. I have used tools like JIRA, TestRail, MySQL, and Apache JMeter.

Experience

SENIOR SOFTWARE TEST ENGINEER, WITTYBRAINS SOFTWARE TECH. PVT. LTD —FEBRUARY 2022 - PRESENT

SOFTWARE TEST ENGINEER, WORKTUALDESK.com - MARCH 2019 – FEBRUARY 2022

SKILLS

Automation Testing
Manual testing
Selenium with JAVA
Selenium with Python
TestNG
GitHub
Jenkins
JIRA
TestRail
Apache JMeter
API testing- POSTMAN
Maven

PROJECTS

BETTER NIGHT

Domain: Healthcare

Technology: ReactJS, Node JS, Material UI

Role: Senior QA

Description: This is the healthcare domain project that deals with providing solution to people who have sleep issues or sleep apnea. It has various stages with the online screening process flowing through the online doctor consultation, providing the home sleep test and therapy device, analyzing its data, and giving back its report. It also involves other parts like SnapMD for an online doctor consultation, Brightree for patients with health insurance, and a provider portal for patients and doctors for their management.

Roles and Responsibilities

- Involved in the preparation of test plans.
- Writing Automation test cases.
- Preparation of data for testing.

- Participated in the preparation & execution of Test Cases on TestRail.
- Performed in UI, Functional, Regression, Smoke & Sanity Testing.
- Conducted API testing using Postman.
- Involved in attending both retrospective & sprint planning calls.
- Worked with developers in debugging complicated issues.

EDUCATION

B.Tech
Babu Banarasi Das Northern
India Institute of Technology

2014-2018

Electrical and Electronics
Engineering

SHARECARE ADVOCACY SERVICES

Domain: Healthcare

Technology: ReactJS, Node JS, Material UI

Role: Senior QA

Description: This is a healthcare domain project with a unique approach to providing advocacy services. A platform to integrate the sponsor, payor, and its members through this platform the sponsors provide the advocates to its members so that they can settle their claims like benefits coverage, medical claims, appeals & Grievances or any other medical-related coverage provided in the plan the member can connect to advocate through various ways like digital messaging email or a phone call, the advocated use this platform to track and fulfill the request created by the member related to his claims. This service provides a more personalized experience to the member compared to the traditional customer care service in which all burden is borne by the member but in advocacy service, all the steps are taken by the advocate.

Roles and Responsibilities

- Involved in the preparation of test plans.
- Writing Automation test cases.
- Preparation of data for testing.
- Participated in the preparation & execution of Test Cases on TestRail.
- Performed in UI, Functional, Regression, Smoke & Sanity Testing.
- Conducted API testing using Postman.
- Involved in attending both retrospective & sprint planning calls.
- Worked with developers in debugging complicated issues.

EDU-Collab

Domain: ED-tech

Technology: Python, Mongo DB.

Role: QA

Description: Edu-collab is an online learning platform made using Python, by using this platform universities and schools can achieve many more benefits that are not available in conventional teaching processes where students have to go to school or college and teachers have to write and teach on blackboard to make them understand. In today's era, the public has limited time so they want themselves to be accessible to the whole world from one place. So, with this software, Teachers can create their courses by uploading videos and students can subscribe to those courses to learn. Teachers can take assessments, answer the questions asked by students and they can set up a live session if needed. Students can choose online courses and they have the facility to make notes on live sessions and ask questions by putting images or making videos and can see the marks obtained in assessments etc.

Roles and Responsibilities

- Preparation and execution of Test Cases.
- Performed in UI, Functional, Regression, and API testing.
- Running test cases and posting defects on JIRA.
- Involved in attending both retrospective & sprint planning calls.

POINT OF SALE

Domain: Retail

Technology: PHP, MySQL

Role: QA

Description: It provides store owners with functionality, where they can easily manage their online stores along with the physical stores. The physical stores will have a POS front-end management system for which the admin can assign a store agent who can easily manage the sales and customers at that particular store. POS systems can work both online and offline with the feature to synchronize all the sales and customer data of the offline store with the online store whenever going online. This module plays a vital role in increasing day-to-day sales by having a management system to manage online stores along with physical stores. The POS front end is built on React to allow an effective UI. Thus, the POS agent can get a user-friendly experience. It also increases the performance of POS by optimizing the speed.

Roles and Responsibilities

- Preparation and execution of Test Cases.
- Performed UI, Functional, Regression, and API testing.
- Running test cases and posting defects on JIRA.
- Involved in attending both retrospective & sprint planning calls.
