Overview

Detail-oriented and results-driven Software Test Engineer with 2 years of experience in manual and automation testing, specializing in API testing, database validation, and exploratory testing. Proficient in defect identification, test case creation, and test strategy development. Demonstrated ability to deliver high-quality software solutions on time while collaborating with cross-functional teams. Experienced in leading testing efforts, including team coordination, and driving continuous improvements. Expertise in Selenium, test automation frameworks, and conducting research and development for new software requirements. Strong focus on ensuring software quality, user satisfaction, and overall performance.

Skills

- Manual Testing (Test Planning, Execution, and Exploratory Testing)
- Automation Testing (Selenium, Testim.io)
- Requirement Analysis (Documenting Functional & Non-Functional Requirements)
- Defect Management (Bug Tracking, TestRail, Mantis)
- Cross-Team Collaboration
- UI/UX & Functional Testing
- Integration & System Testing
- Regression & Performance Testing
- Jira, CI/CD
- BDD
- Cross-Browser & Platform Testing
- API & Database Testing (Postman)
- Agile & Scrum Methodologies
- TestNG Framework
- Maven Project Management
- Leadership & Mentorship
- Technical Documentation
- Problem-Solving
- Time Management
- Generative AI testing
- TDD

Work Experience

Software Associate Test Engineer
Project on Track Pvt Ltd, Hyderabad
Mar 2023 – Present

Project Name 1: Project On Track
Project: Cloud-Based Construction Management Platform
Domain: Construction ERP Product

- Participated in test planning and requirement analysis to ensure comprehensive test coverage and alignment with project objectives.
- Defined a robust testing strategy for major modules and submodules.
- Designed and executed test cases, including exploratory tests for edge scenarios and undocumented use cases.
- Identified, reported, and tracked defects, collaborating with developers for timely resolution.
- Performed smoke, integration, system, regression, and re-testing to validate functionality, stability, and performance.
- Generated and maintained test plans, test cases, and reports, ensuring traceability and adherence to quality standards.
- Mentored junior testers and optimized collaboration with developers to meet project deadlines without compromising quality.

Project Name 2: Vendor Portal
Project: The Vendor Portal is a web-based application designed to streamline vendor management
Domain: Construction ERP Product

- Led client discussions and requirement-gathering sessions to align business needs with technical solutions.
- Analyzed and documented functional and non-functional requirements for seamless implementation.
- Developed structured specifications, use cases, and workflows to ensure clarity for the development team.
- Prepared detailed requirement documents, including system functionalities, user roles, and workflows.
- Conducted research and analysis to incorporate industry best practices and improve system scalability.
- Developed process flowcharts, wireframes, and design documentation to guide development.
- Collaborated with developers and architects to validate technical feasibility and align system architecture.
- Led requirement review sessions to track progress, address issues, and ensure project alignment.

Mobile Application Testing

- Conducted manual testing to ensure functionality, reliability, and performance of mobile applications.
- Performed UI/UX, functional, integration, and end-to-end testing to enhance user experience.
- Identified critical defects, and collaborated with developers for resolution.
- Validated compatibility and responsiveness across multiple devices and OS versions.
- Created and maintained test documentation and defect reports for quality assurance.

Education & Qualification: B.Tech (Bachelor of Technology) from Maharshi Dayanan University, Rohtak-Haryana
