PROJECTS

1. CRM System

Team Size: 20

Role: QA Executive

Description: In this project, users can create multiple quotations by selecting doors and windows frames. These quotations can then be converted into orders for invoicing. Afterward, surveys and drawings are conducted for each order. Once the drawings are approved, production, delivery, and installation are carried out accordingly. Additionally, service maintenance is provided for each order to ensure ongoing customer satisfaction.

Job Responsibilities:

- Created a testing plan, created test cases, Executed the test cases, and documented identified bugs.
- Conducted testing across web, Android, and iOS platforms, ensuring seamless data coordination among them.
- Conducted testing on unique functionalities such as synchronization with Google and custom email, chat functionality, and clocking in/out within defined location parameters.
- Gathered client requirements and communicated them to developers, followed by providing a demonstration to the client.

2. ERP System

Team Size: 20

Role: QA Executive

Description: In this project, we have developed an ERP system and implemented multi-tenancy functionality, allowing for the creation of new companies with various plans and permissions tailored to their specific needs.

Job Responsibilities:

- Create a test plan, A test plan contains all the information related to the testing process, test case, Requirement traceability matrix, test tool, team and schedules, reporting tool, etc.
- Conducted testing across web, Android, and iOS platforms, ensuring seamless data coordination among them.
- When we find a defect on the ERP system, we report that bug and log it into any bug reporting tool as well as create a test report, also we provide all the necessary information to the development team regarding the defect.

3. CRM Insurance

Team Size: 5

Role: QA Executive

Description: A consortium of five projects aimed at developing insurance services tailored for individuals, businesses, and organizations, including Know Your Customer (KYC) processes and facilitating insurance claims.

Job Responsibilities:

- Create a test plan, A test plan contains all the information related to the testing process, test case, Requirement traceability matrix, test tool, team and schedules, reporting tool, etc.
- Evaluated the integration between projects and conducted testing on calculations utilizing a predefined formula.
- Conducted testing on Bank ID login functionality as well as authentication via Google Authenticator.
- Regular communication with clients to gather requirements, particularly given that the project is conducted in the Swedish language.
