SUMMARY

Innovative Full-Stack Developer with 2+ years of experience transforming business requirements into robust web applications. Proven track record of independently developing and deploying production-grade software solutions including billing systems, AI-integrated chat applications, and ERP platforms.

TECHNICAL EXPERTISE: - Backend: Laravel, PHP, RESTful API Development & Integration, OpenAI API - Frontend: HTML5, CSS3, JavaScript, Livewire, React (familiar) - Database: MySQL, Complex Query Optimization, Database Architecture - Real-time: WebSockets, Live Chat, Reactive Components - Business Logic: License Management, Payment Systems, Inventory Control

NOTABLE PROJECTS: ✓ Offline Billing Software: Developed complete POS solution with monthly subscription model, license auto-lock system, and thermal receipt printing. Currently serving 10+ retail shops with 99.9% uptime. ✓ AI-Powered Chat Application: Built real-time messaging platform integrated with OpenAI API for intelligent responses. Implemented WebSocket for instant messaging and RESTful APIs for mobile compatibility. ✓ Petrol Pump ERP: Designed comprehensive management system handling inventory, sales tracking, and financial reporting with role-based access.

WHAT I BRING: - End-to-end development capability (from concept to deployment) - Problem-solving mindset with focus on scalable solutions - Experience with third-party API integrations (Payment, AI, SMS) - Strong understanding of business logic and user experience - Quick learner eager to adopt new technologies and best practices.

Actively seeking opportunities in dynamic organizations where I can contribute to challenging projects, mentor junior developers, and grow expertise in cloud-native architectures, Docker, and advanced API design patterns.

WORK EXPERIENCE

FULL-Time Full-Stack Developer (Laravel) | Anjali Computers, Gwalior

<https://www.anjalicomputers.com/> Jan 2024- Oct 2025

- Worked as a Full-Stack Developer while pursuing MCA, gaining 1.9 years of hands-on experience in building real-time business applications.

INTERNSHIP

1. Full-Stack Web Developer Intern

Oct 2023- Nov2023

CODE CLAUSE

PROJECTS

Projects Worked On

OFFLINE BILLING SOFTWARE (Production)

Technology Stack: Laravel, PHP, MySQL, JavaScript, Livewire • Developed complete Point of Sale (POS) solution for retail shops • Implemented automatic license management with monthly renewal system • Created secure activation code mechanism for subscription control • Designed thermal receipt printing (80mm) and A4 bill formats • Built comprehensive product inventory with GST calculations • Developed daily/monthly sales reporting with export functionality • Currently deployed in 10+ shops with active subscriptions Key Features: - Offline functionality (no internet required) - Auto-lock after 30 days with activation code system - Multi-shop deployment capability - Barcode support and thermal printing - Customer management and credit tracking Impact: Generated recurring revenue model, 100% client satisfaction

Petrol Pump Management Software

Technology Stack: Laravel, PHP, MySQL, Chart.js, JavaScript • Designed comprehensive ERP for petrol pump operations • Developed multi-nozzle fuel dispensing tracking system • Created daily/monthly stock reconciliation reports • Implemented credit customer management with due tracking • Built expense tracking and profit/loss calculations • Designed role-based access (Owner, Manager, Operator) Key Modules: - Fuel inventory management - Cash/credit sales tracking - Employee attendance and salary - Tank dip reading and loss calculation - Banking and payment reconciliation Impact: Reduced manual errors by 70%, saved 3+ hours daily

Tyre Inventory Management System <https://tyres.anjalicomputers.com/>

- Developed a system to manage tyre inventory across multiple warehouses.
- Implemented automated reorder processes and stock level monitoring.
- Utilized Laravel, MySQL, and Bootstrap for backend and UI development.

Shoe Manufacturing Industry Order Management System

<https://order.anjalicomputers.com/>

- Developing an order management system to streamline order processing and inventory management.
- Features include order tracking, production scheduling, and third-party API integrations.
- Utilized Laravel for backend development.

Vansawali – Dynamic Family Tree Management System

<https://vansawali.anjalicomputers.com/>

- Built a dynamic and interactive web-based application to digitally represent generational family structures. The system allows users to create, visualize, and manage family trees with support for multi-generational relationships. Implemented a tree-like structure where users can view each member's details along with photos, supporting both horizontal and vertical lineage growth. The intuitive interface and graphical representation provide a clear and user-friendly experience for understanding ancestral relationships.
- Technologies Used: Laravel (Backend), HTML, CSS, JavaScript, and external UI libraries (Frontend)

Arogyadham Chikistalay Evam Anusandhan Kendra – Static Website Development <https://arogya.anjalicomputers.com/index.html>

- Developed a static informational website for Arogyadham Chikistalay Evam Anusandhan Kendra, a hospital based in Gwalior. The website was designed to provide essential information such as hospital services, doctor availability, contact details, and location map. Ensured a clean and responsive layout using HTML, CSS, and JavaScript to enhance user accessibility across all devices.
- Technologies Used: HTML, CSS, JavaScript
