PgSql	

Projects

Online Leave Management System, Asp.net, PgsqL • It eliminates manual paperwork, streamlines approvals, and provides real-time insights into employee leave records. • Frontend: ASP.NET ☑ , HTML, CSS, JavaScript • Backend: C# • Database: PostgreSQL
--

Transfer Management System, *Asp.net,sql server*

- The Transfer Management System is a web-based application designed to handle employee transfer requests within an organization efficiently. The system streamlines the process of applying for, reviewing, approving, and tracking transfer requests, ensuring transparency and reducing manual paperwork and we use hashing for secure password storage.
- Frontend: ASP.NET  web form, HTML, CSS, JavaScript
- Backend: ASP.NET  C#
- Database: Microsoft SQL Server
- Hosting: IIS

Myntra Clone, *html,css*

- As the primary developer, I created the Myntra clone project, a feature-rich e-commerce web application, and my ability to create engaging online shopping experiences.
- Creating a website using HTML, CSS.

Amazon Clone, *html,css*

- Designed and implemented the layout and structure of the website, ensuring a user-friendly browsing experience.
- Crafted responsive web pages that adapt seamlessly to various screen sizes and devices, employing CSS media queries and flexible layouts.
- Integrated interactive elements such as hover effects, dropdown menus, and transitions to enhance user engagement and interactivity
