SURAJ KUMAR PRAJAPATI

FULL-STACK WEB DEVELOPER

PROFILE

Aspiring MERN Stack Developer with a strong foundation in JavaScript, React, Node.js, and MongoDB. Seeking an entry-level position to leverage academic knowledge and contribute to innovative web application development.

TRAINING

MERN Stack Developer with 6 months of industry experience at Hanumant Technology. Proficient in building dynamic web applications using React, Node.js, Express, and MongoDB. Seeking a challenging role to contribute to innovative projects and enhance my technical skills.

TECHNICAL SKILLS

Frontend: (HTML, CSS, JavaScript, React)

Backend: (Express.js, Node.js)

Database: (Mysql, MongoDB)

PROJECTS

- **Build an E-Commerce web application with JavaScript, local storage, Dynamic, Jwt and API handling**
It is a Javascript based project .
In this project, we're building an e-commerce web application entirely with vanilla JavaScript, leveraging local storage for client-side data management and handling API calls for server communication. By using vanilla JavaScript, we maintain full control over the frontend logic, ensuring a lightweight and efficient application. Local storage allows us to store user data locally, providing seamless persistence across sessions.
Technology Used: - JavaScript, React, Express, Nodejs, Local storage, API Handling, Jwt, Payment Gateway, HTML5, CSS3
- **Implementing React Context API**
implementing the React Context API has been instrumental in creating a more efficient and scalable web application.
Create Context: Initialize context with React create Context().
Provide Context: Wrap components with Provider and pass data using value.
Consume Context: Access shared data using use Context hook or Consumer component.
- **Single Page Application using Tailwind CSS and React Router Dom . Setting Up React Router Dom:** Install React Router Dom package. Define routes using < Route> components to render different components based on the URL.
Styling with Tailwind CSS: Install Tailwind CSS and configure it in your project. Apply Tailwind utility classes directly in JSX or create custom CSS components
Building Components: Create React components for each page or section of your application. Use React Router's < Link> component for navigation between pages, ensuring that the application remains a single-page experience
