SUMMARY

I am a qualified Frontend Software Developer with over 1+ year of experience in website design and development. I specialize in building dynamic and responsive web applications using React JS. My strong creative and analytical skills allow me to craft intuitive and aesthetically pleasing user interfaces while ensuring functionality and performance.

SKILLS

Javascript

React.js

Redux

Tailwind

RESTful Api

NEXT js

Communication

Responsive Web Design

HTML5

CSS3

Bootstrap

WORK EXPERIENCE

React js Frontend Developer , Techdock Labs

January 2023 - July 2024

- Proficient in building dynamic, responsive web applications using React JS
- Deep understanding of React component lifecycle and state management
- Strong understanding of responsive design and cross-browser compatibility
- Expertise in using React hooks for managing state and side effects

Internship - Techdock labs

July 2022 - December 2022

EDUCATION

Master of Computer Application

July 2019 - June 2021

Integral University

- Experience with web technologies including HTML, CSS, JavaScript, and various frameworks
- Knowledge of software engineering principles and practices

Bachelor of Computer Application

July 2016 - June 2019

Integral University

- Experience with object-oriented programming and software engineering concepts

PROJECTS

Project 1 : Roses (Dating App)

Duration : January 2023 – June 2023

GitHub Repository : <https://github.com/nazirali007/Roses-Web-Panel>

- Developed responsive UI components using React JS for a feature-rich dating app.
- Collaborated with the team to integrate RESTful APIs with the front end.
- Implemented state management and optimized component performance.

- Worked with Material-UI for building user interfaces and ensuring a consistent look and feel.
- Assisted in implementing secure user authentication flows.

Project 2 : Pocket League (Bowling Application)

Duration : June 2023 – September 2023

GitHub Repository : <https://github.com/nazirali007/Bowing-Web-Application.git>

- Built interactive UI components using React JS for a bowling application.
- Developed features to support multiple league types and dynamic scoring.
- Integrated front-end with backend services to fetch and display real-time league data.
- Ensured responsive design and cross-browser compatibility.
- Utilized state management techniques for smooth user interactions.

Project 3: Society Management System

Duration : September 2023 – November 2023

GitHub Repository : <https://github.com/nazirali007/Essential-Apartment-Parking.git>

- Developed interactive front-end components using React JS for managing shop allotments, bookings, and parking spaces.
- Created a dynamic user interface to display available and booked shops and manage parking areas.
- Collaborated with backend developers to integrate API services for real-time data updates.
- Implemented responsive design principles to ensure accessibility across devices.
- Enhanced user experience by optimizing component performance and ensuring smooth navigation.

Project 4: Gurash (E-Commerce platform)

Duration : November 2023 – March 2024

GitHub Repository : <https://github.com/nazirali007/Buy-And-Sell-Web-Admin-Panel.git>

- Developed a responsive user interface using React JS for an e-commerce platform, enabling buying and selling of products by category.
- Implemented dynamic product listings, search functionality, and category filters for enhanced user experience.
- Integrated RESTful APIs to manage product data and user interactions in real-time.
- Optimized front-end performance to handle high traffic and multiple concurrent users.
- Collaborated with backend developers to ensure seamless integration and data flow between the front-end and backend services.

Project 5: Aapno Abhimanyu (Political party-worker management App)

Duration : March 2024 – June 2024

GitHub Repository : <https://github.com/nazirali007/Social-Media-Web-Application.git>

- Designed and developed the admin panel using React JS to manage posts and user interactions on a political social media platform.
 - Implemented functionalities for the admin to create, upload, and manage posts, including features for editing and deleting content.
 - Built front-end components for users to view, like, share, and comment on posts, ensuring a seamless user experience.
 - Integrated API services for real-time updates and interactions.
 - Optimized the application for performance and scalability to handle a growing user base.
-
