OBJECTIVE:-

Seeking a dynamic role in the field of technology that allows me to apply my skills and knowledge gained through academic pursuits, with a keen interest in software development and programming language.

EDUCATION: -

11/2020 – 07/2024	Bachelor of Technology (CSE) Maharana Pratap Group of Institutions
04/2019 – 04/2020	Intermediate / 12th (UP Board) Khalsa Inter College Kanpur
04/2017 – 04/2018	High School / 10th (UP Board) Khalsa Inter College Kanpur

PROJECTS:-

1. Flappy Bird Game :-

06/2021 – 08/2021

- Flappy Bird is a very popular game with a good amount of python logic implemented
- The player controls a bird to avoid pipes, and the score increases when the bird passes through a gap in the pipes. The game ends if the bird is collides with the pipes or the ground. The code handles graphics, player input, scoring, and collision detection
- imports necessary libraries and modules, including (random) (sys) and (pygame)

2. Voice Assistant K-Junior:-

07/2022 – 08/2022

- K-junior is a Voice Based AI Assistant which is developed in Python Programming
- Imports necessary libraries: (time), (pyttsx3) for text-to-speech (speech recognition) for voice recognition, (date time), (wikipedia),(web browser), (os), and (py jokes).Initializes the text-to-speech engine (pyttsx3) Searching on Wikipedia ('wikipedia' command). Opening YouTube ('open youtube' command). Playing music from a directory ('play music' command). Responding to greetings ('hello', 'good morning', 'good night'). and multiple types of command

3. Food Application(PetFull):-

08/2023 – 05/2024

- Problem Statement:-**To assist students or individuals who are relocating to a new city and may not have extensive knowledge about the local food options available at affordable prices and other options like :- what is famous in this city and more things.
- The main objective of the PetFull is to provide food to the student/individuals at the cheapest possible price with highest Quality at remote locations. This application provide the variety of food options to the customers that will help them to choose best meal for them of higher Quality. This application is Solely designed for Colleges where student can reach nearest Mess/Eatery for food.
- Team Structure :-**there are Frontend Team(two members) and Backend Team(two members) my role as: Backend Developer in Group Project
- Frontend Developers use the java programming language and Backend Developers use the python programming language

CERTIFICATE: -

•TCS ION:-

(A Career Edge Programme organized by TCS ION)

•MPGI Hacks:-

(Organized the event - MPGI Hacks along with my team mates and got appreciation from the college)

•TECH GYAN :-

(A certification program for advance python programming)

•Apex :-

(Participation in College Event - Apex and Winner of Gully Cricket Tournament(cricket game))

•Code-O-Fiesta :-

(A coding event being organized by me and team mates)

•Math Marathon :-

(Participated in the Math Test being organized by the MIT School of Engineering)

SKILLS:-

- Python
- MongoDB
- Django
- Django REST API
- Oops
- Adobe Photoshop
- Github
- MS PowerPoint
- SQL

Interests:-

- Photography
- Coding Challenges
- Video Game
- Travelling
- Fitness
