EXPERIENCE AND RESPONSIBILITIES OF POSITION:

1. IT CONSULTANT, DIRECTORATE OF CENSUS OPERATIONS

08 FEB 2021 – Till Date

- Managed data using Excel and other tools to ensure accuracy and efficiency, with a specific focus on Utilizing Power BI for advanced data visualization and analysis.
- Created and enhanced database structures to optimize data management processes, integrating seamlessly with Power BI for streamlined reporting, analytics, and insightful data analysis.
- Gathered, cleaned, and organized data from diverse sources, employing Power BI's capabilities for data transformation, modeling, and in-depth analysis to ensure data accuracy and consistency.
- Designed dynamic and interactive dashboards in Power BI, Using its rich visualization features to not only present trends but also delve into deeper data analysis, extracting valuable insights for informed decision-making.
- Developed web applications with PHP and Codeigniter.
- Built software for data analysis using VB.NET (VBA) for a government department, focusing on leveraging data insights to drive informed policy-making and operational efficiency.
- Developed applications with Android Studio for a Data Recovery Site (DRS).

2. CORPUS DATA INFORMATION SERVICES PRIVATE LIMITED

10 JUNE 2019–30 NOV 2020

- Checked backgrounds of loan applicants.
- Monitored employee attendance.
- Managed monthly billing.
- Reviewed balance sheets and income tax returns (ITR).
- Created daily Management Information System (MIS) reports using Microsoft Excel.

ACHIEVEMENTS: Awarded “Best Performance Award” at “Corpus Data Information Services Private Limited”.

CERTIFICATIONS:

1. Get Job Ready: Power BI Data Analytics for all levels – Codebasics
2. Intermediate SQL: Data Reporting and Analysis - LinkedIn Learning
3. SQL for Data Analysis - LinkedIn Learning
4. Excel: Mother of Business Intelligence – Codebasics
5. Introduction to Data Analytics - IBM

EDUCATION:

1. MEWAR UNIVERSITY

AUG 2015 – JUNE 2018

Master of Computer Application

2. SIKKIM MANIPAL UNIVERSITY

MAY 2012 – MAY 2015

Bachelor of Computer Application

PROGRAMMING LANGUAGE: PHP, Python, PLSQL, Excel VBA

TOOLS/PLATFORMS: Excel, Power BI, MySQL, STATA, CodeIgniter, Android Studio, VB.NET

PROJECTS:

1. **INTEGRATED INFRASTRUCTURE MANAGEMENT SYSTEM (IIMS):** Created an Integrated Infrastructure Management System (IIMS) to replace cumbersome Excel-based methods for handling firewall access requests and project-related port openings. This system introduced a clear approval hierarchy, improved tracking of request status, and ensured privacy by limiting access to authorized users. It also resolved issues like insufficient approval records and difficulty in accessing past data.

- Developed a Ticketing system for Firewall Access requests, Virtual Machine (VM), and all other activities.
- Responsible for backend development using PHP with the CodeIgniter Framework and MySQL for the database.
- Utilized MySQL database, PHP with CodeIgniter Framework, XAMPP server, and frontend technologies including HTML, CSS, Bootstrap, JavaScript, and Ajax.

2. POWER BI PROJECTS:

(a) State-wise Indian Marital Status by Age & Gender:

- Developed a project analyzing Indian marital status by age and Gender, utilizing visual tools such as India Map, Play Axis, Donut Charts, and Stacked Bar Chart, with data sourced from India Census 2011.

(b) UP Population in five-year age group by Gender:

- Developed a project examining Uttar Pradesh's population in five-year age groups by Gender, employing visual tools including DAX Functions, Tree Map, Ribbon Chart, etc., sourced from India Census 2011 data.

3. Census 2011 Data Analysis through MySQL:

Outcomes:

- State wise highest literacy rate
- Create and insert data into a temporary table
- Combined data using union operator
- Windows function for the Top 3 Districts from each state with the highest literacy rate.

4. VBA Projects:

- Appending 500+ Excel files from a folder using VBA.
- Merging tables from two different workbooks based on a key using VBA.
- Exporting file listing data from TXT to MS Access database using MS Access VBA.

5. VB.NET Projects:

(a) Electronic Abridged House list (eAHL): Created an Electronic Abridged House list (eAHL) system to efficiently crop and store House list images digitally, facilitating easy access and future use.

- Developed a system to scan and crop Houselist images, storing essential details digitally for streamlined accessibility.
- Implemented Microsoft Access as the backend database to manage and retrieve information efficiently.
- Enhanced data organization and accessibility by digitizing Houselist images for future reference and ease of use.

(b) File Search: Developed a File Search system to alleviate the challenge of locating specific images within millions of records on the server efficiently. This software enables users to quickly determine the availability and location of desired images, along with details such as size and date/time. Once located, users can easily copy the files to their desired destination.

- Generated a list of files using a command prompt from the server, and stored the listing of all files into PostgreSQL database.
- Designed a system to search for files within the database, retrieve their paths, and copy the files from the server to the local storage based on those paths.
- Utilized PostgreSQL database.

6. Android Projects:

(a) Gate Pass: Previously, when visitors accessed critical rooms, their IDs and basic information were collected. With this application, their images, IDs, and additional details can now be collected.

- Implemented features to capture visitor details such as name, ID, photographs, and purpose for thorough documentation.
- Enhanced record-keeping capabilities by integrating image and ID collection functionalities into the gate pass system.

(b) ICD-10 (MCCD Directory):

- Enhanced usability and accessibility by enabling dynamic searching functionality within the ICD-10 app for quick and relevant data retrieval.
