SUMMARY

Experienced Software Engineer with 1.5 years of hands-on expertise in designing, developing, and deploying scalable software solutions. Proficient in multiple programming languages including Java, Spring Boot, React.js, Python, and C++. Strong foundation in algorithms, data structures, and software design principles. Skilled in building RESTful APIs, integrating frontend and backend systems, and working with databases such as MS SQL Server. Experienced in Linux-based environments, shell scripting, and networking fundamentals such as TCP/IP and routing. Demonstrated ability to thrive in agile teams, adapt to evolving project requirements, and deliver high-performance applications across domains like ERP and Visitor Management Systems (VMS).

WORK EXPERIENCE

BACKEND DEVELOPER

May,2023-Sept,2024

FUTURE CLOUD APP

- During my internship Developed and maintained scalable applications using Java Spring Boot, ASP.NET Core, and React.js.
- Led a team of four developers, providing technical guidance, conducting code reviews, and enforcing best practices.
- Collaborated with cross-functional teams to gather business requirements and deliver robust backend solutions.
- Built and integrated RESTful APIs and microservices, with a focus on performance, scalability, and security.
- Assisted in managing backend infrastructure, including API routing, server configuration, and system health monitoring.
- Applied Linux-based deployment strategies and used basic shell scripting to automate tasks and manage processes.
- Mentored junior developers, resolved technical issues, and improved team productivity.
- Contributed to architecture decisions, ensuring quality, maintainability, and timely delivery of software solutions.

FRONT DEVELOPER

Feb,2023-May,2023

FUTURE COULD APP

- As front i Designed and implemented complex front-end architectures using React.js, with a focus on ERP system requirements.
- Collaborated with stakeholders to transform business needs into user-centric interfaces and technical specifications.
- Developed custom React components including data grids, interactive forms, charts, and dashboards to handle extensive enterprise data.
- Implemented authentication, authorization, and data encryption strategies to protect sensitive information.
- Ensured responsive UI performance and cross-browser compatibility across different platforms.
- Deployed applications in Linux environments, monitored server-side processes, and utilized shell scripts for deployment automation.
