

SHWETA PRIYA

Consultant - Software Developer

To drive agriculture-focused digital transformation by leveraging my expertise in scalable API integration, ASP.NET, SQL Server, and system design. Passionate about empowering farmers and strengthening agri-value chains through e-Governance platforms and Digital Public Infrastructure (DPI) such as Aadhaar. Committed to contributing to projects that upskill farmers, build sustainable agritech ecosystems through public-private partnerships (PPP), and deliver measurable, citizen-centric impact.

Address

Muzaffarpur, Bihar

EDUCATION

2019 - 2022

**L.N. Mishra College of
Business Management,
Muzaffarpur**

- Master of Computer Applications

2016 - 2019

**L.N. Mishra College of
Business Management,
Muzaffarpur**

- Bachelor of Computer Applications

SKILLS

- ASP.NET
- ADO.NET
- SQL Server
- PosgreSql
- HTML
- CSS
- JavaScript
- API
- Data Science

WORK EXPERIENCE

Microsave Consultancy (MSC)

JAN 2025 - PRESENT

Technical Consultant – Web & API Development

- Led end-to-end API development and system integration to digitally connect Bihar Krishi with state and national agritech platforms under the Digital Farmer Services (DFS) initiative.
- Collaborated with multiple government departments (Agriculture, Horticulture, Soil Conservation) to enable seamless, secure data exchange and interoperability across backend systems.
- Built and deployed scalable backend services using ASP.NET and SQL Server, supporting real-time farmer onboarding, scheme delivery, and interdepartmental coordination.
- Integrated key components of Digital Public Infrastructure (DPI) such as Aadhaar authentication, enabling transparent and targeted benefit delivery.

**Digital Government Research
Centre (NICSI)**

Web Developer

AUG 2022 - DEC 2024

- Developed and maintained scalable web applications using ASP.NET, C#, SQL Server, PostgreSQL, and JavaScript to support digital initiatives across multiple government departments.
- Focused on backend development, system architecture, and performance optimization, improving the reliability and responsiveness of critical e-Governance platforms.
- Collaborated directly with various state-level departments to gather technical requirements, design digital workflows, and implement end-to-end web-based solutions.
- Ensured data accuracy, secure integrations, and real-time validation processes to support transparent and efficient public service delivery.
- Contributed to NIC's mission of building secure, user-friendly, and interoperable digital systems in alignment with national e-Governance standards.

PROJECTS

Digital Farmer Services – DFS (Bihar Krishi)

A key digital initiative aimed at transforming agricultural service delivery in Bihar through centralized, farmer-facing platforms.

- Designed and developed APIs to enable seamless data integration between Bihar Krishi and multiple state departments (Agriculture, Horticulture, Soil Conservation, etc.).
- Collaborated directly with government stakeholders to implement secure, scalable, and interoperable APIs for scheme enrollment, subsidy tracking, and farmer verification.
- Ensured compliance with Digital Public Infrastructure (DPI) standards by integrating services like Aadhaar authentication, DBT, e-KYC, and real-time data validation.
- Enhanced the platform's backend infrastructure using ASP.NET, SQL Server, and RESTful service architecture, improving performance, reliability, and cross-system connectivity.
- Contributed to farmer empowerment by facilitating digital access to schemes, benefits, and advisory services, aligned with the national IDEA and Agristack frameworks.

E-PIMS (ECHO)

A web-based platform developed to streamline salary and incentive payments for Community Health Officers (CHOs) under the Health Department of Bihar.

- Ensured timely and transparent disbursement of salaries and performance-based incentives at the grassroots level.
- Reduced manual errors by automating payment processes and integrating with PFMS and bank APIs.
- Improved operational efficiency and financial accountability across the CHO network through real-time tracking and digital workflow implementation.

College Affiliation Portal

An online platform designed to manage temporary and permanent affiliation requests for graduate programs across various universities in Bihar.

- Enabled institutions and colleges to apply for affiliations digitally, streamlining workflows and reducing paperwork.
- Developed features for document verification, inspection scheduling, and multi-level approval tracking.
- Promoted transparency and accountability by integrating backend dashboards for the Directorate of Higher Education.

GIS Bihar – Geographic Information System

A state-level initiative to integrate GIS technology for enhanced planning, monitoring, and decision-making across sectors.

- Developed digital modules enabling spatial mapping of infrastructure, agriculture, health, and education services.
- Contributed to visual dashboards and geo-tagging features for real-time monitoring and governance insights.
- Supported cross-departmental data integration to promote evidence-based policy-making and development planning.

LSBA Bihar – Lohiya Swachh Bihar Abhiyan

A sanitation initiative aimed at achieving Open Defecation Free (ODF) status across rural Bihar through community engagement.

- Worked on web-based reporting tools to track sanitation coverage, infrastructure rollout, and behavior change programs.
- Supported Behavioral Change Communication (BCC) initiatives by digitizing campaign monitoring and impact metrics.
- Enabled district-wise performance tracking for policy makers via digital dashboards.

MWRD Bihar – Minor Resources Development

A digital initiative supporting irrigation and water resource management to improve agricultural and rural infrastructure.

- Developed and supported modules for managing tube well networks, irrigation schemes, and water usage data.
- Integrated scheme monitoring features and backend analytics to promote efficient and sustainable water usage.
- Ensured system interoperability with agriculture platforms to optimize farmer access to water resources and reduce duplication.
