SOFTWARE TESTING ENGINEER

I am a skilled software testing engineer with expertise in manual testing methodologies. With 2.5 years of experience, I excel in designing and executing test plans, identifying defects, and collaborating with teams to ensure high-quality software solutions. I am dedicated to maintaining product integrity and optimizing user experience through rigorous testing practices. I want to be associated with an organization which can provide me with a dynamic work sphere to extract my inherent skills as a professional and develop my aptitude to further organizations.

PROFILE SUMMARY

- ✓ Proficient in systematic **troubleshooting** methodologies to identify and resolve complex technical and operational issues efficiently
 - ✓ Proficient in utilizing **Postman** for API testing, including creating requests, assertions, and running automated tests to validate functionality and performance.
 - ✓ Skilled in conducting rigorous **Black Box Testing** methodologies to ensure comprehensive software functionality and usability, delivering high-quality products to meet client and end-user requirements.
 - ✓ Skilled in using **Jira** for issue tracking, project management, and collaboration within Agile software development environments.
 - ✓ Effective in **project management** within software testing, overseeing timelines, resources, and deliverables to ensure efficient and successful completion of testing initiatives.
 - ✓ Experienced in conducting **regression testing** to ensure the stability and integrity of software applications across multiple releases and updates.
 - ✓ Experienced in writing and analyzing **system requirements**, ensuring clear and comprehensive documentation to meet business and technical needs.
 - ✓ Skilled in **team building**, fostering collaboration, and enhancing team performance to achieve project goals effectively.
 - ✓ Proficient in **Hyper Text Markup Language (HTML)**, skilled in creating and maintaining well-structured, responsive web pages. Experienced in utilizing HTML to enhance user experience and interface design.
 - ✓ Experienced in **user experience (UX) design**, focusing on creating intuitive and user-friendly interfaces. Skilled in conducting usability testing and implementing feedback to improve overall user satisfaction.
 - ✓ Skilled in **smoke testing** to quickly verify the basic functionality of new software builds. Experienced in identifying critical issues early in the development process to ensure stability.
 - ✓ Proficient in **web testing** to ensure robust functionality, usability, and performance of web applications across diverse environments.
 - ✓ Skilled in **compatibility testing** to ensure seamless performance of web applications across various browsers, devices, and operating systems, optimizing user experience.
 - ✓ Proficient in **functional testing** methodologies to verify software meets specified requirements and functions correctly, ensuring high quality and reliability of applications.
 - ✓ Experienced in **manual testing** techniques to meticulously verify software functionality and identify defects, ensuring thorough quality assurance across diverse applications.
 - ✓ Skilled in utilizing **Microsoft Azure DevOps** for managing test cases, test plans, and automated testing workflows, enhancing efficiency in software testing processes.
 - ✓ Experienced in **customer relationship management (CRM)**, leveraging effective communication and problem-solving skills to enhance client interactions and project outcomes as a software testing engineer.
