TECHNICAL SKILLS

Language & Database: Python, JavaScript, TypeScript, C++, SQL (PostgreSQL), NoSQL (MongoDB)

Web: React.js, Next.js, Node.js, Express.js, Nest.js, Flask, FastAPI, REST APIs, TailwindCSS, HTML, CSS, React Native

Tools: AWS, Docker, GitHub, Git, Selenium, GitHub Actions, Supabase, Firebase, Redis, BullMQ, Linux, Sentry

Key Skills: Microservices, Monorepo, Object-Oriented Programming, Operating Systems, Data Structures, Algorithms

EXPERIENCE

Software Engineer (Freelance)

Jan 2023 – Present

Upwork

Remote

- **OurDotArt:** Optimized AWS resources and re-built critical workflows, reducing operational costs by \$200 per month
- Revamped cart and checkout processes with lazy loading and caching, which reduced drop-off rate by over 50%, significantly improving conversion and monthly revenue.
- Redesigned a serverless architecture, improving system scalability and supporting a 3x surge in traffic
- Led remote code reviews and team collaboration to ensure robust and scalable software development
- **AutoMynd:** Created an MVP using MERN stack and Azure OpenAI models for automating medication label extraction, saving 45 minutes per clinician time
- Integrated 5 API's, including sentiment analysis and summarization using Azure Language Studio, refining clinical data processing and the analysis of reports and consultations
- Enhanced API performance using asynchronous processing and caching, which helped to reduce latency
- Orchestrated containerized CI/CD pipelines for rapid prototyping and efficient feature rollouts
- **Dataspeed:** Migrated and refactored legacy codebase from Laravel to Django, resulting in a 19% revenue increase and reducing maintenance overhead
- Integrated 12 Generative AI models including OpenAI (GPT-4, DALL-E) and Replicate AI models to provide personalized reporting and enhance user engagement
- Improved backend APIs to process documents, convert them into numeric embeddings, and improved context-based data retrieval from vector database
- Designed robust continuous integration and automated testing pipelines, accelerating release cycles and minimizing downtime

PROJECTS

Real-Time Auction System | *Next.js, Node.js, Express.js, React Native, Socket.io, Python, PostgreSQL*

[Code](#)

- Built a **Socket.IO-based** real-time bidding system with **10ms response time**, enabling user authentication, room-based participation, and live bidding with a remote bidding mechanism mapping desktop buttons to Android volume buttons for real-time bid execution

In-Memory Database | *C++, CPython, Mutex Locks, JSON*

[Code](#)

- Built an in-memory low-latency database achieving 99% throughput with TTL and snapshot caching; implemented a CPython wrapper abstraction layer with future support for multithreading and API usage

CarTrackAlerts | *Next.js, FastAPI, Redis, BullMQ, Node.js, Express.js, TypeScript, Selenium, PostgreSQL*

[Live](#)

- Developed a platform that allows users to set preference filters and a queue-based scheduler selects jobs based on user plans, scrapes 100+ listings using Selenium, Requests, and sends email notifications to users for new listings

ACHIEVEMENTS

- Scored 82% on the "Designing and Implementing Microsoft Azure AI Solution" exam and earned the **Microsoft Certified AI Engineer Associate** certification
- Contributed to 6+ open source projects as an **Open Source Contributor** and led developers for contribution as Project Admin at GSSOC
- Collaborated with multiple clients to grow their business, maintained a **100% Job Success Score**, and earned **Top Rated Status** on **Upwork**, the world's leading talent marketplace
- Identified and upgraded outdated password hashing algorithms, proposing enhanced security measures like SHA-256 and character policies to mitigate breach risks **Goldman Sachs**

EDUCATION

Rameshwaram Institute of Technology and Management

Bachelor of Technology in Computer Science and Engineering

Lucknow, India

Sep 2021 – May 2025
