

Anjali Gupta

+91 9555437581 / guptaanjali90757@gmail.com/ [LinkedIn](#) / [Github](#) / [Portfolio](#)

EDUCATION

• **Pranveer Singh Institute of Technology**, India BTech (Information Technology), 2025

CGPA: 8.7

Courses: DataStructures(DSA), OperatingSystems, MachineLearning, DBMS, OOPS

WORK EXPERIENCE

• **Full Stack Web Developer | PearlThoughts (Internship)** - ([Click Here](#))

-Developing scalable, high-performance web applications using React, Node.js, and RESTful APIs. I facilitated agile processes, coordinated tasks, and optimized code for seamless integration, ensuring project success through collaboration, efficient problem-solving, and user-focused solutions.

-I led a high-performing team of four to design, develop, and deploy robust web applications that adhered to modern industry standards and agile methodologies.

• **Web Engineer Trainee | Kraftpixel Digital Solution (Internship)**

-Contributed to end-to-end development of web applications, enhancing user experience and functionality. Built responsive front-end interfaces with React, managed back-end systems using Node.js and Express, optimized performance, and implemented RESTful APIs. Gained hands-on experience in problem-solving, collaboration, and delivering impactful results in a fast-paced environment.

PROJECTS

• **Fake Currency Classifier | python, mlflow, S3 Bucket, DVC, Dagshug.** ([GITHUB](#))

-Developed a Fake Note Classifier using the VGG16 model for accurate currency authentication, leveraging TensorFlow and Gemini Gen AI for optimized performance.

- Integrated MLflow for experiment tracking and DVC for efficient data management, ensuring reproducibility and AWS S3 Bucket for dataset storage.

-Enabled real-time webcam-based predictions for instant classification of currency notes as genuine or counterfeit.

• **Weather-Dashboard-Application | React, Restful API, Vite, HTML, CSS, Js.** ([GITHUB](#))

-A Weather Dashboard application that allows users to view the current weather and a 5-day forecast for any city.

-The Web-app is powered by React for a dynamic and responsive UI, utilizing Context API for state management and JavaScript for client-side functionality.

-It fetches weather data using the OpenWeatherMap API through a RESTful API integration.

- The application delivers real-time updates, displaying key weather details like temperature, humidity, and conditions, providing users with an intuitive interface to track weather forecasts.

• **API Blog App | React, ExpressJs, API, CRUD, HTML, CSS, JWT, MongoDB.** ([GITHUB](#))

-Developed a robust REST API for a Blogging Platform using Express.js, enabling seamless post creation, commenting, and user interaction.

-Integrated JWT authentication and role-based access control, ensuring secure and personalized user experiences.

-Implemented efficient pagination, sorting, and keyword-based search to enhance content discoverability and engagement.

TECHNICAL SKILLS

- Languages: C/C++(Proficient), Python, SQL.
- Full Stack Development : HTML, CSS, Javascript, ExpressJS, NodeJS, ReactJS, Restful API, JWT, Context API.
- Database: Mysql, Postgres, MongoDB.
- Data Science: NLTK, NLP, Standard ML Algorithms, Neural Networks.
- Data Analysis: Numpy, Pandas, Matplotlib ,MLflow,Dagshub.
- DeveloperTools: VSCode, Git, Dockers, AWS, CICD,DVC.

HONORS AND AWARDS

- 200 plus questions on leetcode(Handle : anjali2110)
- 5 star in hackerrank problem solving(Handle:Anjali Gupta)
- 300 plus score on geeks for geeks(Handle : guptaanjali90757)
- Full stack web development certificate ([Click Here](#))
- Young Turks Round 1 cleared certificate ([Click Here](#))
