SOFTWARE DEVELOPER

Dynamic Software Engineer with a proven track record at Logicsoft International Pvt Ltd, specializing in Typescript and NodeJS. Adept at collaborating with cross-functional teams to deliver tailored software solutions, enhancing user experience and driving project success. Strong problem-solving skills complemented by expertise in CI/CD pipelines and documentation.

KEY COMPETENCIES

- Typescript
- CSS
- HTML
- Mockaroo
- Bootstrap
- Javascript
- NodeJS
- Postgres SQL
- MongoDB
- CI/CD Pipeline
- Angular
- ExpressJS
- JIRA
- GITLAB/GITHUB
- Postman

PROFESSIONAL EXPERIENCE/PROJECTS

Software Engineer | Logicsoft International Pvt Ltd

April 2024 - Present

Built and maintained dynamic websites using online platforms; managed full-stack development with TypeScript and Node.js. Delivered enhancements and bug fixes, ensured CI/CD deployment via GitLab, and worked together cross-functionally to optimize user experience and project delivery

Food Safety and Standards Authority of India (FSSAI)

- participated to the development and maintenance of the FSSAI website, ensuring seamless user experience and high performance.
- Worked on both frontend and backend using TypeScript, Node.js, and HTML/CSS.
- merged API services and managed data flow to support real-time updates on the platform.
- Resolved critical bugs and implemented feature enhancements to meet stakeholder requirements.
- Utilized GitLab CI/CD pipelines for automated testing, deployment, and version control.
- worked together with UI/UX designers and QA teams to ensure design consistency and quality assurance.
- Wrote clean, modular, and well-documented code following best software engineering practices.
- Ensured cross-browser compatibility and responsive design for improved accessibility.

Food Coporation Of India (FCI)

The Food Corporation of India (FCI) is a government agency responsible for ensuring food security in India through the procurement, storage, and distribution of essential grains like wheat and rice under the Public Distribution System (PDS)

- Participated in end-to-end development including design, coding, testing, and deployment.
- Developed and deployed a fully functional website for the Food Corporation of India, focused on performance, scalability, and user accessibility.
- Built dynamic and responsive frontend interfaces using Angular, ensuring seamless user interaction and modern design.
- merged Node.js backend with Java-based microservices for secure and modular application architecture.
- worked together with backend teams to implement REST APIs and ensure smooth data communication across services.

TradeXChange

TradeXchange is a digital trade facilitation platform under Uganda's National Single Window (NSW) initiative, enabling importers, exporters, and retailers to submit trade information through a unified system. The platform streamlines government coordination, reduces clearance times, and ensures transparency. I participated to implementing features such as Supply Chain Traceability, Verifiable Credentials, and Paperless Solutions, allowing stakeholders to track goods from origin to destination using QR codes and lot numbers in compliance with international standards.

- Followed best coding practices with modular architecture, REST API integration, and proper documentation for maintainability.
- participated to improving system transparency, security, and performance, reducing manual effort and processing delays.
- merged QR-based Supply Chain Traceability, enabling users to track product origin and journey via unique lot numbers.
- Built secure, paperless workflows using Verifiable Credentials to ensure compliance with Ugandan and global trade standards.
- Ensured responsive design and cross-browser compatibility for seamless use by customs officers, traders, and government agencies.

Treko Wave LLP

Nov 2023 - April 2024

Vehicle Tracking System

Worked on a Vehicle Tracking System for the company to monitor and manage real-time vehicle movements using a web-based interface.

- Handled full deployment and hosting of both frontend and backend on cloud infrastructure
- Developed a web-based Vehicle Tracking System to display real-time vehicle locations using GPS latitude and longitude data.
- merged live map view to track running vehicles via GPS devices installed in each vehicle.
- Implemented backend services to collect, store, and process location data from tracking devices.
- Built user interface with live tracking features, vehicle history, and route details using modern web technologies.

EDUCATION

2020-2024 | Hindustan Collage Of Science And Technology

Bachelor of Technology-Computer Science Engineering

2019 - 2020 | St Andrews Public School

12th - Science-66%

2017 - 2018 | St Andrews Public School

10th - All Subject-65%

CERTIFICATIONS/COURSES

Physics Wallah

Full-Stack Web Development | 11 April, 2023 - 4 August, 2023

Coding Kingdom

Front-end Development | 04 November, 2022 - 13 May, 2023

Great Learning

Backend Development | 08 Nov, 2020 - 16 May, 2021
