

SKILLS

- SQL, Power BI, Tableau, ETL (Extract, Transform, Load) Processes, NumPy, Pandas, Matplotlib, Seaborn, Descriptive statistics, Hypothesis Testing, Feature Engineering, Excel, Exploratory data analysis (EDA), Statistical Analysis, Big Data, Data mining, Python, Data Analysis, Data visualization, Linear Regression, Logistic Regression

EXPERIENCE

Production AnalystJan 2020 - Jan 2023

Riyadh Cable GroupRiyadh, KSA

- Conducted root cause failure analysis using SAP data and Big-Query and successfully resolved **95%** of the **problems**.
- Observed **65%** of failures as material defects, **30%** related to operations.
- Forecasted needs,analyzed material consumption, optimized procurement, and managed inventory based on FIFO principles, reducing stock wastage by **20%**.

Engineering InternMay 2018 - May 2019

Tenneco Automotive India Pvt LtdChakan MIDC, Pune

- Extracted and analyzed automotive component data using **SQL** to derive valuable insights.
- Conducted detailed analysis on component failure rates, revealing that **40%** of failures were due to **fatigue**, **30% to thermoshock**, and **30% to hot-shake**.
- Developed and maintained Tableau **dashboards** to monitor automotive component testing results, facilitating easy interpretation and decision-making.
- Applied diverse testing methodologies (fatigue, thermo-shock, hot shake) to simulate realworld conditions.
- Expertly utilized data analysis techniques to **generate insightful graphs** (time-based temperature, load, and vibration analysis) to solve **80%** of defects

PROJECTS

CREDIT RISK ANALYSIS AND LOAN DEFAULT PREDICTION

- <https://github.com/AhmedKhan2210/loan-default-risk-analysis>
- Cleaned and preprocessed** datasets with missing values of **2% to 27%**, addressed skewness and outliers, achieved **98% accuracy** for reliable analysis.
  - Identified critical patterns, revealed **78.91% default rates** for **Extremely High Risk** customers and **13.59%** for **Very Low Risk** customers.
  - Discovered a **49% default rate** among **high-income** borrowers opting for **economy property** loans, highlighting a significant risk factor.
  - Analyzed loan defaults, determined **no significant effect of credit score**, while **default risk increases with age**.
  - Developed insights showing the **35-44 age** group had the **lowest default rate**, while those under 25 had a higher-than-expected default rate.

CUSTOMER PROFILING OF AEROFIT TREADMILL

- <https://github.com/AhmedKhan2210/Aerofit-project>
- Developed customer profiling strategies for AeroFit's treadmill products using Python, revealing that **44% preferred the KP281** model.
  - Identified purchasing likelihoods, showing that **57% of male and 42.3% of female** customers are inclined to buy AeroFit treadmills.
  - Analyzed user demographics, discovering that **80%** of users are aged between **21.8 and 36.6 years**, with an average age of 28.7.
  - Evaluated age group preferences for the KP281 model, finding that **68.75% of young**, **23.75% of middle-aged**, and **7.5% of older** individuals favored it.

NETFLIX DATA ANALYSIS

- <https://github.com/AhmedKhan2210/Netflix-Business-Case>
- Analyzed Netflix's content distribution, revealing that **70%** consists of **movies**, recommended **increasing TV shows** to enhance viewer retention in **India**.
  - Identified peak TV release months in **July 9.53%** and **December 9.34%**, suggesting strategic launches to capture 20% of content engagement.
  - Conducted year-over-year analysis of Netflix content, highlighting **exponential growth since 2000**, with annual peaks exceeding **1100 content count**.
  - Evaluated content across 42 categories, finding International **Movies 14%** and **Dramas 12.6%** as top genres, providing insights for targeted strategies.

E-COMMERCE TREND ANALYSIS (BRAZIL RETAIL STORE)

- <https://github.com/AhmedKhan2210/Target-Business-Case-SQL->
- Conducted in depth analysis of a **100k+** e-commerce order dataset (2016-2018) for a major Brazilian retail company using SQL and Excel to uncover trends, customer behavior, pricing variations, and shipping preferences.
  - Quantified that **39%** of orders are from the **afternoon**, **28% from the night and morning**, and **5% from dawn** by employing joins, subqueries, and CTE to establish relationships between multiple data sources.
  - Identified order cost trends from **2017 to 2018** (Jan–Aug), revealing a **137% increase in total costs** enabling better forecasting and budget optimization
  - Examined payment trends, determining **credit cards** as the preferred method (**75%**), **UPI (19%)** and **vouchers (5%)**, with **debit cards** accounting for only **2%**.

ACHIEVEMENTS

Ranked in the **Top 1%** of Learners at Scaler, demonstrating exceptional problem-solving skills with **99.68% accuracy** across **938+ challenges**.

EDUCATION

Scaler2025
