SUMMARY

IA highly skilled Node.js Developer with 12 months of experience in designing, developing, and maintaining robust web applications. Proficient in Node.js frameworks such as Express.js with a strong understanding of object-oriented programming (OOP) principles and design patterns. Demonstrates expertise in front-end technologies like HTML, CSS, JavaScript, and database management using MySQL and SQL Server.

SKILLS

Node.js | JavaScript | MySQL, MS SQL | jQuery | PHP (CodeIgniter, Laravel) | Git, GitHub | HTML | Push Notification | Firebase | RESTful API

WORK EXPERIENCE

Backend Developer

Role-Based File Management System (Sanskar info TV Pvt. Ltd.)

- Developed a file storage system using the Node.js fs module, storing data on the hard disk through a web-based interface.
- Implemented role-based access control (RBAC) to manage content permissions for Super Admin, Admin and Employee roles.
- Designed a secure and scalable file-handling mechanism for reading, writing, and managing files dynamically.
- Used Node.js for API endpoints to handle file uploads, retrieval, and modifications based on user roles.

Employee Portal (Sanskar info TV Pvt. Ltd)

- Expert in designing and managing databases, ensuring optimal data storage, retrieval and security.
- Proficient in integrating APIs, enabling smooth communication between various system and services.
- Developed a comprehensive employee portal using MySQL, managing key HR operations such as leave management, tour management, and attendance tracking.
- Integrated a Face Punch attendance system that automates attendance tracking using cron jobs for real-time updates.

Sanskar tv

- Integrated log tracking, redis, and device identifiers to monitor service usage and improve functionality.
 - Worked on third-party API integration to enhance app functionalities and improve content distribution.
