PROJECTS

Online Education System (Ongoing)

- I used HTML to create the structure and CSS and JavaScript to make the page more interactive.
- It aims to provide a platform for delivering educational content and facilitating online learning. It allows students to access courses, study materials, interact with instructors and peers, submit assignments, and track their progress. The system is designed to be user-friendly, scalable, and adaptable to different educational institutions or organizations.

Online Food Delivery Website (Ongoing)

- The structure was created using HTML, and the page's interactivity was enhanced with CSS and JavaScript.
- Offers a website where customers can purchase food at reasonable prices, as well as simple and delectable cooking methods and an order tracking tool.
