Education

BTech(CSE), (CGPA 9.4) up to 5th semester	2021 - 2025
Bennett University, Greater Noida, India	

Skills

- Programming Languages:** C++ | Python | Java
- Web development:** HTML | CSS | JavaScript | PHP
- Database Management:** MySQL
- Version Control:** Git |GitHub
- Data Visualization Tool:** Power Bi
- Frameworks:** Tensorflow | Scikit-learn | Flask
- Soft Skills:** Teamwork | Content Writing | Decision-Making | Creative
- Technical Skills:** Data Structures and Algorithms | Exploratory Data Analysis | Machine Learning

Projects

I. Text Summarizer

[Python, Git, Conda, Pegasus, NLTK, PyTorch, YAML]

- Developed an end-to-end text summarization solution, covering all stages of the data processing pipeline. This included modules for data ingestion, transformation, and validation.
- Utilized the 'samsun' dataset and implemented Google's 'Pegasus' model for abstractive summarization.

II. ParkOnGo: A Smart Parking Solution

[Google Places API, HTML, CSS, JavaScript]

- Collaborated with my team to develop a parking management system for the Smart India Hackathon college preliminaries.
- Contributed to the development of a real-time tracking system for parking slots using a 2 QR code system
- Integrated Google API(s), specifically the Google Places API, into a web interface.

III. Open-Source Map API

[Python, Flask, Folium, Google Cloud SDK Shell]

- Developed and deployed a Python Flask application on Google Cloud Platform, leveraging the Google Cloud SDK Shell for seamless deployment and management.
- Implemented functionality to create polygons dynamically based on user-provided vertices and generate motorable path between 2 points.
- Integrated external libraries such as Folium for visualizing the created polygons on interactive maps and Geopandas for generating GeoJSON representations of the polygons.
- Enhanced application reliability and maintainability by incorporating logging functionality to capture and log errors and responses, facilitating effective troubleshooting and monitoring.

IV. Sentiment Analysis

[Python, NLTK, scikit-learn, SVM classifier]

- Processed 1.6 million tweets, performing data cleaning, tokenization, and feature extraction.
- Using Support Vector Machine (SVM) model, 75.8% accuracy on the test set and 93.5% on training was achieved.
- Created visualizations, such as word clouds, to gain insights into common words for positive and negative sentiments.

Certificates

- Certified in Google Data Analytic (Coursera)**
- Certified in Predictive Modeling and Analytics (Coursera)**
- Certified in Machine Learning: Regression (Coursera)**
- Certified in Specialized Models: Time Series and Survival Analysis (Coursera)**

Awards & Achievements

- Awarded “**Certificate of Appreciation**” for qualifying in **Smart BU Hackathon 2023 (University Level Smart India Hackathon)**.
- Awarded “**Appreciation Letter for Excelling**” in Odd Semester 2022-23.
- Awarded “**Certificate of Achievement**” for bagging a position in top 20 in a hackathon conducted by Career Service, Bennett University.

Position of Responsibility

- Content writer** at Financial Literacy club, Alpha Summa, at Bennett University.
