Education

- Integral University Lucknow** Lucknow, India
Bachelors of Computer Application ; CGPA 9.6 Sep 2021 - June 2024
Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases

Skills Summary

- Languages:** Python, PHP, C, SQL, HTML, CSS, Javascript
- Frameworks:** Scikit, Pandas, Matplotlib, Numpy, PyTorch, TensorFlow, Django, Flask, React, Reactnative
- Tools:** PowerBi, Excel, NLP, Docker, GIT, MySQL, Android Studio
- Platforms:** Linux, Web, Windows, AWS, Google Cloud
- Soft Skills:** Leadership, Communication, Event Management, Time Management

Internship

- Machine Learning with Python Intern- Integral University (CA Department)** May 2023 - Sep 2023
Learning and Development
 - Completed an intensive Machine Learning with Python internship, gaining hands-on experience in data processing, model training, and evaluation using libraries such as Pandas, Numpy, and Scikit-learn.
 - Developed proficiency in building and optimizing Machine Learning models, with a focus on practical applications and data driven solutions.
 - Applied Machine Learning techniques to real-world datasets, enhancing understanding of predictive modeling and data interpretation.
 - Collaborated on projects that involved data analysis, feature engineering, and visualization using Matplotlib, enhancing problem solving and analytical skills.

Projects

- CampusConnect -An Anonymous Social network (Javascript,Reactnative,Firebase)**
Built cross platform mobile app that allow user to share thoughts and photos while preserving their anonymity.
Leveraged Firebase's real-time database for instant update across the network, enabling seamless, dynamic content sharing among users.
Designed a responsive user interface with a focus on usability, adaptability, and scalability to accommodate large volumes of anonymous interactions.(March'24)
- Sales performance Analysis and Forecasting (Python,SQL,PowerBi)**
Analyze Sales data to uncover trends indicators and forecast future sales to help stakeholders make data-driven decisions.
Use SQL to pull data from multiple sources (e.g., sales transactions, customer information, product details) into a structured database.
Use Python (with pandas, numpy) for initial data exploration and transformation. Visualize data trends and relationships using Matplotlib and Seaborn to identify seasonal patterns, popular products, and high-revenue regions.
Load the processed and aggregated data into Power BI for interactive dashboards.
Build a forecast visualization, allowing stakeholders to see predicted future sales and adjust marketing or inventory strategies.
Create a Power BI report with narratives explaining trends, and provide strategic recommendations. (Oct'2024)

Volunteer Experience

- CR (Class-Representative) of Class** Nov 2021-July 2024
I acted as a liaison between faculty and students, organizing study sessions, and enhancing communication to improve academic engagement and support.
Organized meetings to address academic concerns, and supported initiatives that enhanced the class's learning experience and cohesion.
- Member Secretary and Coordinator in University's Technical and Cultural Committee** Feb 2022-July 2024
Organized Technical workshops, Cultural events, and facilitated team collaboration, enhancing student engagement and promoting skill development across diverse activities.
Leading event planning, managing logistics, and promoting participation to enrich the campus experience and foster community involvement.
