Experience

Infosys Limited

Software Quality Engineer

13 June 2022 - Currently Working

Since joining Infosys Limited, I have embarked on an exciting journey that has allowed me to grow both personally and professionally. During my initial period at Infosys, I underwent a comprehensive training program that equipped me with essential skills and knowledge in the field of software testing. Currently working in Infosys Limited as a Software Quality Engineer. My job role is to test various web and mobile applications against bugs and defects. I work as manual and automation tester. I am looking forward to grow further in this field.

Skills

- Manual Test Script Creation
- Functional Testing
- Test Scenarios
- Test summary report
- Software Development Life Cycle (SDLC)
- Software Testing Life Cycle (STLC)
- Agile Methodology
- Test planning
- Test Execution and reporting
- Regression and re-testing
- Scrum Methodologies
- Automation Testing using Selenium (Eclipse IDE)

Projects

Automation and Manual Testing for Web Application.

Created manual and automated test scripts as per the user requirements for the web based application "Selenium.dev".I checked for its readiness, stability and performance by creating various test scenarios for both positive and negative scenarios.

Automation and Manual Testing for "Code Store Analysis".

Created manual and automated test scripts as per the user requirements for the web based application "Code Store". This application provides code componenets, tools and knowledge assets to Infosys employees for variuos fields like Machine learning, Devops,

Security, Cloud, Angular, etc. I checked for its readiness, stability and performance by creating various test scenarios for both positive and negative scenarios.

Manual and Automated Test Script on "Infosys Pride" Web Based Application.

Created manual and automated test scripts as per the user requirements for the web based application "Infosys Pride" portal. This application provides process templates and documents regarding various Infosys units. I checked for its readiness, stability and performance by creating various test scenarios for both positive and negative scenarios.

Manual and Automated Test Script on "ConnectInfy" Web Based Application.

Created manual and automated test scripts as per the user requirements for the web based application "ConnectInfy". This application provides jobs to experienced people who desire to work and connect to Infosys. I checked for its readiness, stability and performance by creating various test scenarios for both positive and negative scenarios.

Manual Test Script on ICICI Banking Application

Created an manual test script on a banking application. As per the user requirements i created various test scenarios and checked for their readiness and stability.

Manual Test Script on HDFC Banking Application

Created an manual test script on a banking application. As per the user requirements i created various test scenarios and checked for their readiness and stability.

Dashboard on Vrinda Store Annual Test Report 2022

The VRINDA Store Annual Report dashboard, created using MS Excel, is a comprehensive visualization tool that presents key financial and operational information about VRINDA Store in a clear and concise manner. The dashboard serves as a powerful tool for stakeholders, including management, investors, and employees, to gain valuable insights into the company's performance and make informed decisions.

Dashboard on Sales of Electronic Items.

The Electronic Items Sales Dashboard, created using MS Excel, is a powerful tool that provides a comprehensive overview of sales performance for electronic products. Through the use of charts, graphs, and tables, the dashboard visually represents sales data over different time periods, enabling users to identify patterns, spot fluctuations, and understand the overall performance of electronic items.

Sales Dashboard For Food Store

The Food Store Sales Dashboard, created using MS Excel, is a comprehensive tool that provides valuable insights into the sales performance of a food store. One of the key features of the dashboard is the ability to analyze sales performance by product category. It provides a breakdown of sales for various food categories.

Microcontroller based Pulse Rate and Body Temperature.

The project on "Microcontroller-based Pulse Rate and Body Temperature" focuses on developing a system that can accurately measure and monitor an individual's pulse rate and body temperature using a microcontroller. This innovative project aims to provide a convenient and reliable solution for monitoring vital health parameters in real-time.
