

Profile Summary

"As a backend developer specializing in Node.js, my primary role revolves around crafting the server-side architecture for web applications. Leveraging my expertise in JavaScript, I utilize frameworks like Express.js to seamlessly handle incoming HTTP requests. I proficiently manage databases, whether it's the flexibility of MongoDB or the structured querying of SQL. My responsibilities encompass designing robust APIs, optimizing performance, and ensuring the scalability of the server infrastructure. Through meticulous attention to detail, I ensure the seamless communication between the server and client, ultimately delivering efficient and reliable web solutions."

Education

Bachelor of Science

Kurukshetra University | 2017-2020

Master Of Computer Application

Dev Bhoomi Uttarakhand University | (2022-2024)

Key Skills

JavaScript, Nodejs, Express, MySql, MongoDB, MUI, Advance Java, Data Structure

Work Experience

Nodejs Intern | QuantmHill IT services & Consultancy, Noida

Nov 2023 - May 2024

Projects:

QBITLOG | 2 Month

- Leveraging Node.js, Express, and MongoDB, the application facilitates seamless project management functionalities.
- The implementation of JWT Authentication ensures secure access control, safeguarding sensitive project data and functionalities.
- Developers are empowered to efficiently save and update project details while effortlessly tracking the progress through comprehensive project update features.

JOB PORTAL | 3 week

- By harnessing the power of Node.js, Express, MongoDB, and React.js, the platform offers a robust environment for seamless job management.
- The integration of JWT Authentication ensures stringent security measures, safeguarding user access to sensitive job-related information.
- With Redux, users can enjoy a streamlined experience, effortlessly viewing and saving job listings, enhancing efficiency and ease of use.

CERTIFICATIONS

- Java Standard Edition
- Data Structures And Algorithms
- Python
