

Technical Skills: Problem Solving, Core Java, SQL, HTML, JavaScript, Node.js, Express.js, React.js, Socket.io, Docker, Kubernetes, Microsoft Azure, Azure DevOps, Jenkins, CI/CD Pipeline, SonarQube, Linux, Shell Script, Terraform, Git, Github.

EDUCATION			
Board	Tenure	Educational institution	CGPA/Percentage
B. Tech (CSE)	July 2019 – July 2023	Vellore Institute Of Technology	8.88/10
Class XII	May 2018 – April 2019	Seth M.R. Jaipuria School	85.0%
Class X	May 2016 – April 2017	Seth M.R. Jaipuria School	91.0%

EXPERIENCE AND ACHIEVEMENTS	
Software Engineer (01/ 01/23 to 05/07/23)	Havells India ➤ Worked on developing microservices, using Node.js, used Mongo DB database. ➤ Worked on microservice with traffic of 15000-20000 requests per day. ➤ Worked with express servers, JWT authentication, sending email notifications, working on applications requiring real-time status updates. ➤ Worked on creating infrastructure including Virtual Machines, Load Balancers, Virtual networks, storage accounts, blob storage, subnets, firewall, Front-door, APIM, Application gateways using Terraform. Used SonarCloud and SonarQube for code analysis. ➤ Worked with Docker for containerization of micro-service and used Azure Kubernetes Service for the deployment of these docker images. ➤ Worked on optimizing the MongoDb database and reduced the overall cost by upto 20%. ➤ Configured Function Apps and App services for the hosting for several micro-service based upon the requirements. ➤ Setup SocketIO on multiple servers for realtime user status update, and configured load balancer for the distribution of requests to the VM's in the Azure backend pool. ➤ Also configured SSL certificate for the domain. Setup VNET peering across various networks and also between databases and storage accounts.
Freelancing (Full stack developer) (05/07/23 to present)	Snooker Project ➤ Developed a web application for snooker game business management for the shop owner. ➤ Customer can be created when they reserve a snooker table, on customer creation, mobile, name, entry time is inputted. ➤ Food item orders can be taken from the customer, the owner can place order on behalf of the customer from the list of available items. ➤ Once the customer finishes playing the game and vacates the snooker table, the owner can complete the customer order and bill is generated which calculates the total amount of the food order and the table amount. ➤ The owner can add stock, update items price, filter customer by date, manage daily expenses, can view daily sales, everything in the same application, which makes the work of the owner a lot easier. ➤ There is also a feature of membership for the customer, which can be used while paying the bill. ➤ Tech stack used: Node.js, MongoDb, Express, Javascript, EJS template, CSS. PG Website ➤ Developed a website for a PG owner. ➤ Website has all the basic functionalities which included the listing of all services provided by the PG. ➤ The images of the PG, payment options, room categories, testimonials of the guests. ➤ It also had contact form, which sends mail to the owner with the query inputted by the site visitor. ➤ Its user-friendly, simple and fast website which makes the visitor to scroll through the website and ultimately know everything about the PG and the services provided. ➤ Tech stack used: React, Node, MongoDB, Bootstrap, Nodemailer.

ACADEMIC PROJECTS

Web Application	We Connect - Web App for seamless communication. ➤ Built a peer-to-peer video calling and group chatting web application which lets users communicate in real time through Web Sockets and WebRTC. ➤ It implements features like group chats, video call meetings and scheduling meetings. ➤ Technologies used - HTML, CSS, Ejs, JavaScript, Node.js, MongoDB, Socket.IO, Nodemailer. ➤ Link
Web Application	Secure Diary ➤ Built the backend of the web app that lets users upload and encrypt files and store them securely on the cloud. The files are encrypted with the help of AES-256-bit cryptographic algorithm implemented using the Crypto JS module of node. ➤ Users can register and login. It also allows users to reset password by sending them an email that contains a One Time Password (OTP). ➤ It authenticates using JWT and makes use of implements two-factor authentication for added security. For decrypting the files user needs to enter the OTP sent to the registered email and then is enter the secret key used to decrypt the file. ➤ Technologies used - Node.js, Express.js, MongoDB, Nodemailer. ➤ Link
Web Application	Open Board ➤ A drawing application with functionalities like erase, undo, redo which also implements features like live sharing with other users, inserting images and creating sticky notes. ➤ Used Stack data structure for undo and redo operations. ➤ It also allows users to download the drawings in PNG format. ➤ Technologies used – JavaScript, Socket.IO, Canvas API. Link
Achievements	➤ Selected for Microsoft Engage program 2021 among thousands of students and worked on project along with my mentor. ➤ Achieved 2552 rank in Google Kickstart. ➤ Got a 1324 rank in Scaler CodeX 2.0 coding contest.
Responsibilities	Web Development Core Team Member: Bit By Bit Club - Coding Blocks ➤ Managing and building the official website of the coding club, guiding juniors, conducting webinars, and learning sessions for the student community.
