Career Objective

Results-driven data professional with a science background and hands-on experience across the full analytics stack — data wrangling, SQL querying, machine learning, and dashboard development using Python, MySQL, Excel, and Power BI. Demonstrated ability to deliver end-to-end analytical solutions across domains including retail, finance, logistics, and job markets through 6 independent projects. Seeking a Data/Business Analyst role where I can apply predictive modelling, data storytelling, and insight generation to drive business decisions.

Skills

Technical Skills:

- Programming & Query: Python, SQL (MySQL)
- Data Analysis: Pandas, NumPy, Advanced Excel, Pivot tables, Power Query, DAX
- Visualization & Reporting: Power BI, Matplotlib, seaborn, Microsoft PowerPoint
- Machine Learning: Scikit-learn, Random Forest, K-Means Clustering, NLP, Deep Learning
- Database & Tools: GitHub, Jupyter Notebook
- Concepts: Data Cleaning, EDA, Predictive Modelling, KPI Analysis, Statistical Hypothesis Testing, Web Scraping

Non-Technical Skills:

- Data Storytelling & Insight Communication
- Attention to Detail & Documentation
- Cross- Functional Team Collaboration
- Reporting & Business Recommendation Generation

Experience

Junior Officer Quality Assurance

Cultivator Phytolab Pvt. Ltd., Jodhpur

Oct 2023 - Jan 2025

- Monitored key quality indicators and supported corrective actions to improve lab performance and ensure compliance. Assisted in audits and inspections, maintaining accurate documentation and regulatory standards.
- Updated SOPs, managed records in Excel, and created presentations, showcasing strong data management and communication skills.
- Collaborated with cross-functional teams to achieve quality and operational goals.

Education

- **Master of Technology (M.Tech): Food Technology** | 2020-22
Sam Higginbottom University Of Agriculture, Technology And Sciences | Percentage: 82.30%
- **Bachelor of Technology (B.Tech): Biotechnology** | 2016-20
Sardar Vallabhbhai Patel University Of Agriculture & Technology | Percentage: 77.88%
- **Senior Secondary (Class XII) : Science** | 2016
Bonanza Convent Hr Sec School, Satna | Board : MPBSE | Percentage: 73.80%
- **Secondary (Class X)** | 2014
CHANAKYA PUBLIC SCHOOL, Satna, Madhya Pradesh | Board : CBSE | Percentage: 70.30%

Trainings / Certifications

- **Data Science** Oct 2025 – April 2026
Internshala Trainings
 - Introduction to Data Analytics
 - Data Management and Analysis with MS Excel
 - Data Visualization with Power BI
 - SQL for Data Analysis and Insights
 - Python Data Preparation and Analysis
 - Data Driven - Machine Learning
 - Natural Language Processing (NLP) essentials Applications to real-world
 - Deep Learning Mastery: Data intensive

Projects

1. **Social Media Analytics for Strategic Branding**

Nov 2025

GitHub: <https://github.com/Alpana-data/Apple-Social-Media-Analytics-using-Excel>

- Analyzed 300+ social media records across 4 platforms; engineered Engagement Rate, Follower Growth Rate, and Campaign ROI metrics using SUMIF, AVERAGEIF, and Pivot Tables across a 7-task analytical framework
- Correlated ad spend vs. follower growth via scatter plots and identified top-performing hashtags and content types per platform, delivering findings through an interactive dashboard
- Tools: Advanced Excel, Pivot Tables, Power Query, Dashboarding

2. **Retail Customer Retention Analytics**

Dec 2025

GitHub: <https://github.com/Alpana-data/Retail-Customer-Retention-Analytics--Power-BI>

- Analyzed 1,001 customer records using Power BI; built DAX measures surfacing 4.5% churn rate, 95.5% retention rate, avg. CLV of 755.51, and 78.24% loyalty redemption rate across 4 tiers and 5 regions
- Identified West region as highest churn zone (9.09%); correlated CLV with days-since-last-purchase to flag at-risk customers and delivered a 7-page interactive dashboard with Key Influencers visual
- Tools: Power BI, Power Query, DAX, Data Modeling

3. **Logistics Optimization for Delivery Routes**

Jan 2026

GitHub: <https://github.com/Alpana-data/Logistics-Optimization-for-Delivery-Routes-SQL>

- Queried shipment data across 20 routes and 10 warehouses using MySQL; found all routes exceeded 20% delay threshold (82–100%), flagged 52 critical orders (>120hr delay), and identified traffic as top cause (486 incidents)
- Pinpointed top 3 highest-delay warehouses and recommended hub-to-hub splitting and capacity-based routing — underpinned by a 6.8% on-time delivery rate indicating systemic inefficiency
- Tools: MySQL, Data Cleaning, Joins, Aggregations, KPI Reporting

4. **Financial Risk Analysis with Python**

Mar 2026

GitHub: <https://github.com/Alpana-data/Financial-Risk-Analysis-with-Python--Blackrock>

- Segmented customers into high-net inflow, high-frequency low-balance, and at-risk profiles; flagged overdrafts, balance volatility, transaction gaps >60 days, and anomalous withdrawals as financial risk indicators
- Validated findings via hypothesis testing — confirmed high-volume accounts carry statistically higher average balances across 7 analytical tasks including profiling, risk identification, and visualization
- Tools: Python, Pandas, NumPy, Matplotlib, Seaborn, Hypothesis Testing

5. **Market Basket Analysis with Python and K-Means Clustering**

Apr 2026

GitHub: <https://github.com/Alpana-data/Alpana-data-Market-Basket-Analysis-with-Python--Target>

- Segmented customers into Frequent Buyers, Occasional Shoppers, and At-Risk groups using K-Means clustering; identified Beauty & Personal Care and Clothing & Fashion as most frequently co-purchased categories
- Flagged low correlation between personalized recommendations and satisfaction, recommending improvements to Target's recommendation engine, cart abandonment strategy, and inventory optimization
- Tools: Python, Pandas, Scikit-learn, K-Means Clustering, Matplotlib, Seaborn

6. **Job Market Trend Analysis with Predictive Modelling on a Web Scraped Data**

Apr 2026

GitHub: <https://github.com/Alpana-data/Job-Market-Analysis-Experience-Prediction-using--Naukri-Data>

- Scraped 2,417 real job listings from Naukri.com across 100+ pages using Python (BeautifulSoup/Requests), handling pagination limits by batching 50 pages per session and merging datasets via Power Query
- Built a Random Forest classification model to predict job experience level (Entry / Mid / Senior) Achieved 65% overall accuracy with strongest performance on Senior-level roles (F1: 0.73), revealing that senior job requirements follow clearer, more consistent patterns than entry-level postings
- Tools: Python, Machine Learning, Web Scraping, Power BI, Predictive Modelling
