SUMMARY

Published peer-reviewed research on WiFi-based Human Activity Recognition accepted for Scopus/Web of Science indexing; final-year Computer Science student specializing in backend development with Python, Flask, FastAPI, SQLAlchemy, PostgreSQL, and MySQL. Experienced in designing REST APIs, authentication systems, database-driven applications, and AI-integrated solutions.

EDUCATION

Integral University
B.Tech, CSE

2022 – Present

SKILLS

- **Programming Languages:** Python, SQL
- **Databases:** MySQL, PostgreSQL, SQLite
- **Frameworks/Libraries:** Flask, FastAPI
- **Tools:** Git, PyMuPDF, Tesseract OCR, OpenRouter, SQLAlchemy, Postman, Dbeaver
- **Soft Skills:** Communication Skills, Problem Solving, Strategic Thinking, Adaptability, Team Work

PROJECTS

- Contract Analyzer & Document Intelligence**
 - Built a Flask Blueprint-based REST API using PostgreSQL and SQLAlchemy with route-level authentication and modular service architecture.
 - Summarized contracts by extracting critical clauses such as indemnity, termination, and payment terms using Mistral and DeepSeek via OpenRouter to streamline manual contract review.
 - Processed PDF and scanned documents by implementing document ingestion and text extraction using PyMuPDF and OCR.
- WiFi-Based Human Activity Recognition (basis for ICASET 2026 publication)**
 - Achieved ~80% classification accuracy using WiFi-based HAR system with ESP32 and router, enabling privacy-preserving monitoring without cameras or wearables.
 - Reached ~80% accuracy across four activity classes by training Random Forest on FFT and autocorrelation features in same-room testing.
 - Built a Python pipeline for RSSI data collection, preprocessing, feature extraction, model training, and real-time inference.
- Freelancer Project Management System**
 - Built a RESTful Freelancer Project Management System using Flask, SQLAlchemy, and PostgreSQL to manage freelancers, clients, projects, tasks, and time logs.
 - Secured user accesses by designing scalable backend architecture with Flask Blueprints and implementing token-based authentication.
 - Enhanced reporting and analytics by developing endpoints for task filtering, project summaries, client reporting, and time-tracking; utilized DBeaver for PostgreSQL schema design and database management.
- Personal Finance Tracker**
 - Tracked expenses and spending trends by building a Personal Finance Tracker using Flask, SQLAlchemy, and PostgreSQL to manage expenses and set budget goals.
 - Categorized expenses and tracked transactions to analyze financial data and spending patterns through implemented reporting features.

CERTIFICATIONS

OCI AI Foundations Associate, Oracle

2025

PUBLICATIONS

- The Evolution of WiFi-based Human Activity Recognition (HAR): A Review of Learning Paradigms and Sensing Modalities, Scopus/ Web of Science indexing (2026), ICASET 2026 (2026), ICASET 2026 (2026) (2026) (2026) – Authored and presented a peer-reviewed research paper at ICASET 2026; accepted after double-blind review and submitted for Scopus/Web of Science indexing.

HONORS & AWARDS

- Resume Writing with AI Job Simulation**, Forage
 - Completed an AI-powered resume writing simulation, applying job description analysis and resume optimization.
- Technology Job Simulation**, Deloitte Australia
 - Completed Deloitte’s tech consulting simulation, building a dashboard mockup that flagged data quality issues for an aviation client.

EXTRACURRICULAR ACTIVITIES

- Recognized for volunteering in “The Escape Rooms” event, Fiesta 2025, and awarded Certificate of Appreciation, Technical Committee, Integral University
- 2025
- Secured top position in intra-college gaming competition, Integral University
- 2024
