SUMMARY

Aspiring Software Developer (2026 Graduate) with skills in Java Backend Development and AI/ML. Built secure Spring Boot applications with JWT authentication and developed real-world AI/ML projects. Strong in REST APIs, MongoDB, problem-solving, and scalable software development.

SKILLS

- **Languages:** Java, Python, SQL
- **Frameworks & Tools:** React.js, Spring Boot, REST API, MVC Architecture, Spring Security, JWT, Git & GitHub, Postman, Maven, Redis, Docker.
- **Database:** MongoDB, MySQL
- **Core:** Data Structures & Algorithms (DSA), OOPs, and CRUD, DBMS, Operating Systems, Computer Networks
- **AI/ML:** NLP, LLMs, Vector Databases, Embeddings, Python, Streamlit

EDUCATION

- B.Tech (CSE) | BBD University , Lucknow , India

CGPA: 8.15 | 2022-26

EXPERIENCE

❖ Java Developer Intern | Codsoft

(Oct 2023 - Nov 2023)

- Developed a Hotel Reservation System handling 100+ bookings using Java and OOP principles.
- Implemented modular backend logic, database integration, and GitHub-based version control.

ACADEMIC PROJECTS

❖ DocuMind AI - Smart Document Q&A Assistant | [Github](#)

- Developed **DocuMind AI**, an AI-powered document assistant enabling users to upload PDFs and interact with documents through conversational question answering using LLMs.
- Built a full-stack application using **React, Spring Boot, MongoDB, and REST APIs** with secure file upload and real-time AI response handling.
- Integrated **OpenRouter API** for AI-generated responses and implemented document text extraction for intelligent context-based querying.
- Designed the project with **RAG-ready architecture**, supporting future enhancements like vector databases, embeddings, semantic search, and multi-document AI chat.

❖ Barbo App - Barber Booking Application | [Live Link](#)

- Developed a full-stack salon booking application using Java, Spring Boot, MongoDB, React, and Tailwind with 12+ REST APIs, handling 500+ users.
- Implemented scalable layered architecture, JWT-based authentication/authorization, and EmailJS for real-time booking confirmations.
- Deployed on Vercel and Render, optimized performance, and tested APIs thoroughly using Postman.

❖ Virality Engine | [Live Link](#)

- Developed a scalable Virality Engine using Java, Spring Boot, Redis, MongoDB, and Docker for real-time social interaction processing.
- Implemented Redis-based virality scoring, spam/rate-limiting guardrails, and concurrency handling for 200+ simultaneous requests.
- Designed optimized REST APIs with layered architecture, ensuring high performance, reliability, and efficient event processing.

POSITION OF RESPONSIBILITY

❖ Associate Technical Head | SCRS , BBDU

(Mar 2025- Present)

- Organized hackathons and coding competitions for a student group of 100+ members.

ACHIEVEMENTS & CERTIFICATIONS

- Achieved Runner-up position at **IBM National Hackathon 2025** for developing an innovative file deduplication and categorization solution.
- **GFG 160 Days Challenge:** Completed GeeksforGeeks 160 Days Coding Challenge, strengthening problem-solving and DSA skills.
