OBJECTIVE

Computer Science (Artificial Intelligence) graduate with strong skills in Java, Spring Boot, REST APIs, SQL, and backend development. Passionate about designing scalable, high-performance software solutions and eager to contribute as a Software Development Engineer by building reliable, efficient, and innovative applications while continuously learning and growing..

EDUCATION

• **Pranveer Singh Institute of Technology**

B.Tech – Computer Science & Engineering (Artificial Intelligence)

Dec 2022- July 2026

Kanpur, Uttar Pradesh

◦ Graduate with First Division

◦ Coursework: Data Structures Algorithms, Database Management System, Operating System, Object Oriented Programming

TECHNICAL SKILLS

- **Programming Languages:** Java, Sql, Python
- **Frontend:** HTML5, CSS, JavaScript
- **Backend:** Spring Boot, Spring MVC, Spring Data JPA, Hibernate, RESTful APIs
- **Core Java:** OOP, Collections Framework, Exception Handling, Multithreading (Basic), Java 8 Features
- **Frameworks & Libraries:** Spring Boot, Spring MVC, Spring Data JPA, REST APIs, Maven, HTTP Client
- **AI:** Cohere API, Prompt Engineering, REST API Integration, Resume Parsing, AI-Powered Text Generation
- **Developer Tools :** Git, GitHub, VS Code, Postman
- **Database :** MySQL, PostgreSQL, Redis

PROJECTS

• **AI Resume Analyzer**

Tech Stack: Java, Spring Boot, Spring MVC, REST APIs, HTML5, CSS3, JavaScript, Cohere AI API, Maven

- Built an AI-powered web application that analyzes resumes based on a target job role.
- Integrated the Cohere AI API to generate ATS-style feedback, identify missing skills, and recommend resume improvements.
- Developed RESTful APIs with Spring Boot and created a responsive frontend for uploading resumes and viewing analysis results.

• **Distributed URL Shortener**

Tech Stack: Java 21, Spring Boot, Spring Data JPA, PostgreSQL, Redis, REST API, Maven

- Developed a scalable URL shortening service using Java 21 and Spring Boot, enabling generation of unique Base62 short URLs from long URLs.
- Implemented RESTful APIs for URL creation, redirection, and analytics, with automatic tracking of click count and last access timestamps.
- Integrated Redis caching to accelerate URL lookups and reduce PostgreSQL database access, improving response performance for repeated requests.
- Designed a clean layered architecture using Controller–Service–Repository pattern with Spring Data JPA and PostgreSQL for persistent storage.

• **University Portal**

Tech Stack: Java, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, MySQL, Thymeleaf

- Developed a full-stack University Management Portal using Java, Spring Boot, Spring MVC, Hibernate, and MySQL for secure student registration and authentication.
- Implemented automated roll number generation, age calculation, default password creation, and secure login with session-based authentication.
- Built a mandatory first-login password reset flow with validation and a Forgot Password module for account recovery.

CERTIFICATIONS

- **Backend Development–** [Physics Wallah](#)
- **Java Programming–** [Simplilearn](#)
