Education

2018 - 2021

B.Tech in Computer Science Engineering

RRIMT, Lucknow

2015 - 2018

Diploma in Computer Science Engineering

Pt. R. J. T. Chandauli, UP

Expertise

- Laravel (including Multi-Tenancy)
- PHP
- Vue.js / Nuxt.js
- Node.js / React.js
- Stripe Payment Integration
- Database Design
- RESTful Services
- Agile Development
- Strapi

Manish Kumar Singh

Software Engineer

I'm a passionate software engineer with 3.6 years of experience. I specialize in building scalable web applications using modern technologies. My expertise includes Laravel, CI, Vue.js, Nuxt.js, Node.js, and version control with Git. I also have experience with multi-tenancy in Laravel, Stripe payment gateway integration, and have worked on 7 diverse projects.

Experience

2025 – Present

Aboxlab IT Solutions, Chandigarh

Software Engineer

- Worked on immigration-related product development using CodeIgniter (PHP) for backend development.
- Developed and maintained modules for a product-based immigration management software used by internal teams and clients
- Collaborated with cross-functional teams including frontend developers, QA, and product managers to deliver scalable features.

2022 – 2025

Teq Mavens Pvt Ltd, Panchkula, Haryana

Software Engineer

- Worked on a wide range of web development projects using Laravel, Vue.js, Nuxt.js, Node.js, and React.
- Integrated Stripe for payment processing and implemented Laravel multi-tenancy architecture.
- Collaborated in cross-functional teams for frontend and backend development.
- Hands-on experience with Git for version control and agile development practices.

Key Projects

1) Business Automation Tools

Laravel-based backend system created to automate internal business operations and enhance workflow efficiency. Focused on building a scalable and maintainable backend structure tailored to enterprise needs.

2) Oboloo

A feature-rich SaaS-based multi-tenancy platform built using Laravel and Vue.js. Leveraged Laravel Tenancy to implement multi-tenant architecture, enabling isolated data environments for each client. Worked across backend and frontend, integrating modules like billing, authentication, and tenant-specific settings.

3) Auric Asset

A trading platform developed with Nuxt.js on the frontend and Laravel on the backend. Contributed to implementing real-time trading features, secure login systems, and a user-friendly interface using SSR for better performance.

4) Building Object Material Portal

Built using Node.js for the backend and React for the frontend. Played a key role in backend development and also contributed to parts of the frontend interface. The platform supports material listings, order tracking, and vendor interactions.

5) Unemployment Tax System

Web application built with Vue.js and Laravel to handle unemployment tax processes. Includes modules for tax form submissions, document handling, and automated workflow management for enterprise clients.

6) WOSA ERP

Enterprise-level immigration management ERP system built using CodeIgniter 2 (PHP) to manage end-to-end operations for immigration and study-abroad consultancy services.

- Developed and maintained modules for lead management, client registration, and visa application tracking.
- Implemented features for document management, application status tracking, and internal workflow automation.
- Worked on modules handling services such as study visas, visitor visas, spouse visas, PR applications, and language test services.
- Built and optimized admin dashboards and reporting features for managing large volumes of client and visa-related data.
- Performed bug fixing, performance optimization, and database query improvements to enhance system stability.

7) Mentorly

Mentorship and learning platform developed with Next.js (frontend) and Strapi Headless CMS (backend) that connects mentors and mentees for professional guidance, skill development, and career growth.

- Developed a responsive web application using Next.js to deliver a fast and SEO-optimized user experience.
- Implemented backend content and API management using Strapi Headless CMS for dynamic data handling and scalable architecture.
- Built features for mentor discovery, profile management, and session booking between mentors and mentees.
- Integrated APIs to support user dashboards, messaging, and scheduling of mentoring sessions.
- Implemented authentication, dynamic content management, and optimized data fetching for smooth performance.
- Collaborated with the development team using Git and Agile workflows for feature development and deployment.
