

Parijat Srivastava

Senior Software Engineer

Lucknow, India
9670768647 | parijat.srivastava@outlook.com

PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience building, delivering, and supporting Django-based enterprise applications for supply chain, sales-force automation, ERP, higher education, IoT, analytics, and AI-enabled operations. Skilled at translating complex workflows into reliable web platforms, REST APIs, asynchronous job pipelines, real-time interfaces, and Docker-based services deployed across AWS and on-premises environments.

TECHNICAL SKILLS

Backend & APIs: Python, Django, Django REST Framework, REST APIs, Django ORM, service-oriented integrations	Async & Real-time: Celery, Redis, Django Channels, WebSockets, Server-Sent Events, scheduled jobs
Data & Enterprise: MySQL, SAP Business One/HANA, Tally integration, Excel/PDF reporting	Cloud & Delivery: AWS (production), GCP and Azure (recent hands-on), Docker, Docker Swarm, Linux, Nginx, Unicorn, Daphne/Uvicorn, Traefik
Frontend & Automation: React, Vite, JavaScript, HTML/CSS, Bootstrap, Selenium, BeautifulSoup	Applied Systems: GPS/OSRM routing, Modbus IoT, FCM, payment integrations, LLM/voice-AI workflows, MCP-based tooling

PROFESSIONAL EXPERIENCE

Sort String Solutions | Sr. Software Engineer

Jan 2023 - Present

- Develop and maintain enterprise workflow applications spanning sales and distribution, supply-chain execution, ERP integration, education administration, IoT device management, analytics, and AI-enabled operational tooling.
- Build Django and DRF backends, server-rendered portals, mobile-facing APIs, role-based workflow engines, background processing, reporting pipelines, and real-time communication features.
- Deliver and support production deployments across cloud and on-premises environments using Docker, Nginx, Unicorn/Daphne, Redis, Celery, and MySQL; troubleshoot critical issues and improve system reliability.

Chirparack Services | Python Developer

Oct 2019 - Dec 2022

- Digitized accounting and bookkeeping workflows through a web-based operational platform that processed Excel data, organized financial records, and generated profit-and-loss and inventory reporting.
- Reduced dependency on manual, paper-based processes by building custom automation and reporting tools that improved visibility, accuracy, and day-to-day decision-making.

CORE STRENGTHS

Enterprise workflow design: Multi-step approvals, role-based access, order-to-dispatch flows, payments, incentives, and operational reporting.	Systems integration: ERP synchronization, payment gateways, mobile apps, map/routing services, notifications, cloud APIs, and external device protocols.
Production ownership: Deployment, monitoring, troubleshooting, performance tuning, background jobs, cache/message-broker operations, and long-term maintenance.	Applied AI & automation: Voice AI, LLM-enabled operations, AI assistants, real-time conversational systems, and automation for business workflows.

SELECTED PROJECTS

Enterprise Sales, Distribution & Supply-Chain Platforms - *Animal feed, dairy FMCG, and cooperative operations*

- Built and maintained multi-tier order-to-delivery workflows covering sales orders, approvals, dispatch, quality checks, payment collection, incentives, inventory, field visits, GPS travel tracking, and operational reporting.
- Integrated operational platforms with SAP Business One/HANA and Tally for master-data synchronization and financial/transaction posting; supported token-authenticated mobile APIs and role-based access control.
- Built live interactive analytics interfaces for KPI monitoring, customer, product, and sales analysis, operational funnel analysis, bottleneck detection, geographic performance, revenue trends, and date/segment-driven reporting across dairy supply-chain workflows.

Tech: Python, Django, DRF, MySQL, Celery, Redis, WebSockets, Docker, Nginx, Gunicorn, OSRM, SAP, Tally, FCM, React, Vite, Bootstrap, Chart.js, AWS, MCP

Educational Institute Management System - *Admissions, academics, finance, communications, and student lifecycle*

- Developed modular workflows for inquiry-to-admission, onboarding, fee plans, collection, student ledgers, academic activities, staff operations, and communications through WhatsApp, IVRS, and an AI-powered chatbot.
- Implemented scalable application infrastructure for REST APIs, WebSockets, background tasks, scheduled reminders, payment reconciliation, bulk operations, and real-time administrative updates.

Tech: Django, DRF, MySQL, Redis, Celery, Django Channels, WebSockets, Nginx/Traefik, Gunicorn/Daphne

IoT Device Management Platform - *Remote Modbus relay monitoring, control, scheduling, and audit trails*

- Implemented web and mobile capabilities to discover, register, monitor, schedule, and control distributed Modbus RTU relay devices over TCP/IP, with real-time device and channel-status updates.
- Integrated device operations with external ERP location hierarchies, Firebase notifications, OTP authentication, Celery Beat schedules, and activity logging for operational traceability.

Tech: Python, Django, DRF, Django Channels, Celery, Redis, pymodbus, WebSockets, FCM

Real-time Multilingual Voice AI Platform - *Outbound calling, product inquiry, promotions, and voice-order capture*

- Contributed to a real-time outbound calling platform that combines telephony, speech recognition, text-to-speech, language models, live transcripts, product and promotion lookup, and structured order capture.
- Supported provider-swappable voice, speech, and language-model integrations designed for multilingual distribution operations across India and Nepal.

Tech: Python, Django, REST APIs, WebSockets/SSE, telephony, STT/TTS, LLM integrations, Docker

Managed Infrastructure & Credential Verification Platform

- Built an internal operations platform for managing client infrastructure records, encrypted credentials, and verification workflows across email accounts, SSH servers, VPN gateways, databases, applications, and AWS accounts.
- Implemented on-demand and scheduled credential verification, live WebSocket status updates, VPN-assisted SSH and read-only database diagnostics, and multi-region AWS resource discovery with cost and right-sizing reports.
- Developed an AI-assisted investigation layer using constrained MCP tools for inventory, AWS, SSH, application, and database diagnostics, with audit logging and daily usage controls.

Tech: React, Vite, Django REST Framework, Django Channels, Celery, Redis, MySQL, Docker, WebSockets, AWS, VPN/SSH, MCP, Anthropic API
