EDUCATION

Rajkiya Engineering College Azamgarh, Uttar Pradesh

B.Tech - Information Technology

2022 – 2026

Azamgarh, Uttar Pradesh

RELEVANT COURSEWORK

DSA, Blockchain, Operating Systems, OOPs Concepts, Computer Networks, Cloud Computing, Data Analytics, Cyber Security, DBMS.

EXPERIENCE

BlockseBlock 📁

July 2025 - August 2025

Role - Blockchain Developer Intern

Punjab, India

- Developed smart contracts using Solidity and deployed on Ethereum.
- Built DApps using Web3.js and integrated MetaMask authentication.
- Optimized gas usage and tested contracts using Hardhat.
- Used IPFS for decentralized storage and ensured smart contract security.

Centre for Development of Advanced Computing (C-DAC) 📁

Sep 2024 - Oct 2024

Role - Cyber Security Intern

Nodia, India

- Performed VAPT on web applications and identified security vulnerabilities.
- Used Kali Linux tools like Nmap and Wireshark for security testing.
- Worked on fixing vulnerabilities like SQL Injection and XSS.
- Analyzed logs and implemented basic security controls.

PROJECTS

Decentralized Google Drive Project [Code](#) 📁 [Live Demo](#) 📁 | [Blockchain Full-Stack](#)

Mar 2026

- Built a decentralized Google Drive using Ethereum, IPFS, and Solidity.
- Developed smart contracts for file storage and access control.
- Integrated MetaMask for authentication and React.js for frontend.
- Ensured secure and tamper-proof storage using blockchain technology.

Blockchain Based Secure Voting System [Code](#) 📁 [Live Demo](#) 📁 | [Voting DApp](#)

Jan 2026

- Built a decentralized voting application using Ethereum, Solidity, and smart contracts.
- Implemented secure voting mechanisms with prevention of double voting and voter duplication.
- Integrated MetaMask wallet authentication and developed the frontend using React.js.
- Ensured transparency, immutability, and tamper-resistant vote management through blockchain technology.

Decentralized Portfolio Website on Polygon [Code](#) 📁 [Live Demo](#) 📁 | [Portfolio Website](#)

Dec 2025

- Built a decentralized portfolio website using Polygon, Solidity, and React.js.
- Integrated MetaMask for authentication and IPFS for storage.
- Reduced gas fees using Polygon network and ensured data security.

SKILLS

Programming Languages: Python, C, SQL, Bash Scripting.

Frontend: HTML, CSS, JavaScript, Bootstrap.

Blockchain Technology: Solidity, Smart Contracts, Web3, DApps, Ethereum, Solana, Hardhat.

Supply Chain: Logistics Optimization, Data Analysis (Excel), SAP/ERP.

Networking&Security: TCP/IP, VPN, DNS, Network Troubleshooting, Firewall Basics, OSI Model.

Tools/Frameworks: VS Code, Remix IDE, GitHub, Git, MetaMask, Jenkins, IntelliJ, Canva, Microsoft 365, VMware, VirtualBox, Wireshark, Linux(Ubuntu,CentOS,Kali,Debian), MongoDB.

EXTRACURRICULAR

- Practiced building smart contracts using **Solidity** and deployed them on Ethereum test networks.
- Explored Web3 concepts by developing basic **DApps** and interacting with blockchain using MetaMask and Ethers.js.
