

SAURABH MAURYA

Machine Learning — Deep Learning — Data Analytics

IIT Patna

saurabhmaurya96685@gmail.com | GitHub | LinkedIn | Kaggle

SUMMARY

Machine Learning and Data Analytics student at IIT Patna with hands-on experience in AI/ML applications using Python, Scikit-learn, OpenCV, Flask, and Streamlit. Skilled in supervised learning, feature engineering, model evaluation, deployment, and predictive analytics. Built multiple ML projects in Computer Vision and Data Science with strong foundations in statistics and data preprocessing.

EDUCATION

Indian Institute of Technology (IIT) Patna

B.Sc. (Hons) Computer Science & Data Analytics

2024 – Present

CPI: 9.08

Skills

Languages: Python, C++, SQL

Machine Learning: Regression, Classification, Clustering, Feature Engineering, EDA, Model Evaluation

Deep Learning: ANN, CNN, RNN, LSTM, GRU, Transfer Learning

NLP & Transformers: Text Preprocessing, Word Embeddings, Word2Vec, Attention Mechanism, Transformer Architecture, BERT

Frameworks/Libraries: Scikit-learn, TensorFlow, PyTorch, Pandas, NumPy, OpenCV, Flask, Streamlit

Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code, Render

CERTIFICATIONS

• IBM SkillsBuild — AI Fundamentals

• Kaggle Learn — Intro to ML

PROJECTS

Face Recognition Attendance System

Python, OpenCV

- Developed a real-time face recognition attendance system using Haar Cascade and LBPH algorithms.
- Automated attendance logging with timestamps for known and unknown users.

Crop Recommendation System

Scikit-learn, Flask

- Developed an ML-powered crop recommendation system using soil and environmental parameters.
- Built a crop recommendation model using Scikit-learn achieving 97% accuracy.

Duplicate Question Pair Detector

Python, Flask, Scikit-learn, Word2Vec

- Developed an NLP-based duplicate question detection system using Word2Vec embeddings and Random Forest classifier.
- Built a Flask web application to predict whether two questions have the same meaning or not.

SMS Spam Classifier

Python, Flask, Scikit-learn, TF-IDF, NLP

Live: <https://sms-spam-classifier-ewaq.onrender.com/>

- Developed an NLP-based SMS spam detection system using text preprocessing and TF-IDF vectorization with a machine learning classifier.
- Built a Flask web application to classify SMS messages as *Spam* or *Not Spam* in real time.
- Deployed the application on Render for online access and real-time predictions.

ACHIEVEMENTS

- Finalist in Puch AI Hackathon (IIT Patna) and Brambha Hackathon
